

Force stopping apps on android

Continue

If you've also asked the question "Why are my apps not working on my Android phone?" from yourself, you're not alone. And we have some tips and tricks to help you get rid of the problem. More than half of Android users globally have reported recently that their apps are crashing, slowing down, or stopping randomly when they open them. The issue was more rampant on Google apps but it affects many other Android apps as well. If unfortunately, apps are not working on your phone, that's not the end of the road. You'll fix the issue in no time after following our guides below. Why are my apps not working on my android phone? Apps not working on Android phones could be a result of various issues. However, it is caused by bad updates in most cases. Apps are updated frequently to introduce new features, improve on the existing ones, fix known issues, and improve security. However, updates can introduce deadly bugs sometimes too, causing the app or your phone to malfunction. Below are some reasons why your apps are not working on Android: Bad app update Insufficient memory and phone storage. Corrupted cache and app data. Bugs and glitches in the app. Temporary system errors. Outdated app or phone software incompatibility and many more. How to fix android apps not working Android apps not working is not the end of the world, and it is what you can fix in a few minutes. Below are our top fixes to try when Android apps are not working properly. Reboot your phone Update or roll back Android System WebView app Check and install Android updates Clear the cache and data for the affected app Update the affected app Force stop the app Uninstall and reinstall the app Reset factory settings 1. reboot your phone Usually, the first step to take when dealing with Android apps not working is to restart your phone. Just press and hold the Power button for about 10 seconds to force your phone to restart. If that didn't do the trick, then you can: Long-press the Power button to bring up the device's power menu. From there, tap the Restart/Reboot option. Some devices require you to swipe instead. Wait for a few seconds until your phone finish rebooting. Most times, restarting your phone is the only thing you need to fix app crashing or hanging issues. However, there are many other fixes to try if the issue persists. Try the next solution! 2. UPDATE OR ROLLBACK THE ANDROID SYSTEM WEBVIEW APP Virtually every Android user in March 2021 faced frustrating issues where many Google and other Android apps stopped working. We learnt that the problem was caused by a faulty update pushed to the Chrome and Android System WebView app. However, the issue has, since then, been fixed via an update to the apps. So, if your apps are not working on Android, we recommend you update the Android System WebView app now. Here's how: Note: the steps might vary depending on the Play Store app version on your phone. Visit the Play Store. Click on your profile icon at the upper-right corner. Select Manage apps from the options, then tap Updates available. Scroll down to search for Android System WebView on the list and tap the Update button to install the latest version. Kindly restart your phone again to implement the new update properly. Try opening your apps to see if the issue is fixed. If not, you can roll back the Android System WebView update since many users reported their apps started working well when they uninstalled the updates. Here's how. Launch your device Settings app and tap Apps & notifications. You may need to hit See all apps to view the apps on your phone. From there, find the Android System WebView app and select it. Look straight to the top-right and tap the 3-dot button. Finally, hit Uninstall updates to roll back the app. We recommend you restart your phone afterwards. 3. check and install android updates I've uninstalled updates for the Android System WebView app, but why are my apps not working on my Android phone still? Well, there are more fixes to try. But for now, ensure your phone software is up to date. If you've always swiped away that "System Updates available" notifications on your phone for whatever reason, you need to go back to it by now. System updates are a way to keep your device free from bugs and glitches in most cases. They come with fixes and stability to keep your apps running smoothly. If you've missed many updates, nonetheless, that's not the end of the road. Follow the steps below to check if you have pending system updates and install them right away. Launch the Settings Go to System - System Updates - Online updates. From there, Check for updates, and if there's any, download and install them. 4. Clear the cache data for the affected app Sometimes, the accumulated cache data of an app can cause it to stop working. When such a thing happens, you need to reset the cache data from the device settings. So, if individual Android apps are not working on your phone, another solution to fix it is by clearing the app's cached data. You can do so by following the steps below: Locate the affected app in your app drawer. Long-press on the app's icon, then tap App info or App details From there, click on Storage & cache. And finally, hit Clear cache to reset the temporary files stored by the app. 5. Update the affected app Equally important, updating your apps to the latest version can help fix the app not working issue. If an app is faulty, it won't work. But thankfully, what caused the problem might have been fixed in the latest update. Follow these steps to update the affected apps from the Play Store. Open the Play Store Tap your profile icon beside the top search bar. Tap Manage apps, followed by Updates available. Try to find the malfunctioning app on the list. If found, tap the Update button next to it to install the latest version. Alternatively, you can tap the Update All button to install all pending updates at once. 6. Force stop the app The next thing to do if the app is still not functioning well after updating it is to force close it. Apps can crash or stop working unexpectedly if it's unable to run a required task at a time. Meanwhile, force-closing an app shuts down the app and its processes, then restart them when you relaunch it. That's a way to fixing the app not working issues sometimes. Here's how: Locate the affected app in your app drawer and long-press it. Tap App info from the pop-up menu to show the app's settings. From there, hit the Force stop button to close the app. After that, relaunch the app normally to see if the issue has been fixed. If not, try another solution below. 7. uninstall and reinstall the app If an app is still not working properly on your phone after trying all the solutions above, we recommend you reinstall the app. This could fix the problem in most cases if it was caused by a compatibility issue, such as when you didn't install the app from the Play Store initially. Here's what you need to do: Locate the affected app on your launcher and long-press it. Tap the Uninstall button to remove the app from your phone. Now, head over to the Play Store to install the app again. If the problem is still not solved, you can try the next solution below. 8. Reset your device Usually, the last resort when something goes wrong on your device is to reset it. And now that your apps are not working and none of the tips mentioned above seems to fix it, you may need to reset your phone to factory setting. But before that, ensure you've backed up all your essential data because they'll be wiped during the process. After that, you can follow the steps below to reset your Android device. Launch the Settings app Find and select System, then tap Reset options. Select erase all data (factory reset). Again, tap ERASE ALL DATA and enter your password to confirm the action. Note: resetting your phone will delete all of the data on your phone so you need to operate cautiously Your device will reboot after a while. Once the process is completed, set up your phone again and reinstall your apps from the Play Store. That should fix the problem. Apps not working on your device is usually not a pleasant experience. Nonetheless, you can solve the problem in a few minutes by applying the solutions mentioned in this article. Related: How to fix Chrome app not working What to do if Gmail notification is not working How to fix Android notifications not working There could be many reasons why Messages keeps stopping Android devices. When the issue hits your device, it prevents you from accessing the messages that were sent and received on your device. Sometimes, it occurs all of a sudden leaving you clueless as to why it happened. Fortunately, there are some ways to fix the Android Messages keeps stopping. Since the issue could be caused due to multiple reasons, a single method may not work to help you fix it. Therefore, we have put together a variety of methods to help you resolve the problem and get access to the messages on your Android device. Why does message keeps stopping? It may be that the Messages app has accumulated a large number of cache files or another SMS manager app installed on your phone interfering with the workings of the stock Messages app or there could be an issue with the main firmware of your device. This section lists out some of the possible causes of the issue so you can prevent them in the future. Cache accumulation of the Messaging app. Software conflict with another SMS managing app. Android Firmware glitch. Badly executed OS update. Now that you have learned the possible reasons why the Messages app keeps stopping Android, the following methods will help you fix the problem on your phone. 1. Force Restart Your Android Phone The first thing you can do to fix the issue is to force reboot your device. This should refresh your OS and fix any minor glitches on the device. Press and hold down the Power button and Volume Up button to force restart your Android device. If this does not work on your phone, you will need to find out the key combination for your specific phone from our website. 2. Clear Data and Clear Cache in Message App You can try clearing the data and cache files for the Messages app to see if that resolves the problem for you. Head to Settings > Apps & notifications > Messages and tap on Storage. Tap on Clear Storage and Clear Cache one by one. The app's cache and data should now be deleted. 3. Wipe Cache Partition in Recovery Mode Occasionally you need to clear the cache partition on your device to ensure old files do not interfere with the new ones. This can be done from the recovery mode on your phone. Reboot your phone into the recovery mode. On most devices, you can do this by turning off the device and then pressing and holding down the Volume Down and Power buttons at the same time. Choose the wipe cache partition option. Your cache partition should now be wiped off. 4. Delete Old Messages If there are any old and unimportant messages saved in the app, you should get rid of them to see if that fixes the issue for you. Open the Messages app on your phone. Select the message you want to delete. Tap on the three-dots at the top-right corner of your screen and choose Delete. Your chosen message will be removed from your phone. 5. Uninstall App Updates of Messages App The Messages app also receives new updates. If you are facing the issue after installing an update, you can try rolling back the update and see if it fixes the problem. Head to Settings > Apps & notifications > Messages on your phone. Tap on Force Stop and then Disable. Tap on the Uninstall updates option Your app should roll back to the previous version. 6. Allow Necessary Permissions for Messages App The Messages app requires certain permissions to use various elements on your phone. You need to make sure it has all the required permissions. Head to Settings > Apps & notifications > Messages and tap on Permissions. Enable all the toggles on your screen. The app should now have all the required permissions. 7. Uninstall Recently Installed Apps If you have lately installed a new app on your phone, it may be causing issues with the stock Messages app. One way to fix the issue is to remove the newly installed app from your phone. Head to Settings > Apps & notifications and tap on the app you want to remove. Tap on Uninstall on the following screen. Your selected app will be removed from your device. 8. Reset App Preferences It is worth resetting the app preferences on your phone to see if that helps resolve the issue you are facing. This can be done from the Settings app on your phone. Head to Settings > Apps & notifications > See all apps. Tap on the three-dots at the top-right corner and choose Reset app preferences. The app preferences are now reset on your phone. If you want a hassle-free solution, you can use a third-party software to fix the Android Messages+ keeps stopping issue on your phone in a few easy clicks. This software is called ReiBoot for Android and it lets you fix the internal system of your device. Once the system is fixed, the Messages app will also get fixed and you will not get any errors with it. The following is how you use this software. Grab the latest version of the software from its site and install it on your computer. Connect your phone to your computer and open the software. Click on Repair Android System on the main interface. Hit Repair Now on the following screen. Enter your phone details and hit Next. Click on Repair Now when the firmware is downloaded to start fixing your phone. Wait for it to fix your device. Your phone should now be repaired. You should no longer have any issues with the Messages app or any other apps on your device. If you are frustrated by the Android Moto3 Messages keeps stopping error on your phone, there are several methods you can try to possibly fix the error on your device. We hope this guide helps you do just that so you can start sending and receiving messages on your phone. ReiBoot for Android is highly recommended when your Android phone goes wrong such as Android stuck in recovery mode, Android stuck on boot screen.
