(This can be set in the Settings window UI: the delayed layer window. Of all the programs I've tried, this one is truly stellar. It gave me every other misfire, like more of brushes and brushes, a color box, a combination of layers, etc. At first, I admit that I was a bit confused with all the options in the interface, but you are really used to drawing really, only time it breaks down is when I insert an image which the app considers it too big, but that's ok as I can adjust the size and it works fine (and automatically stores my work when folded) the brushes can be very slow, but in fact they are perfect for what I need The rulers are also very practical Indeed, if you can't draw, as they say, negative comments, which in my opinion are a user's fault, they may be on the wrong calq ue or hidden or can be reduced i by their opacity. I really like that. If you read it, I recommend you download it. A big plus is a single ad that unlocks all blocked features within 18 hours unlike other apps that bombard ads and block everything. The Bravo developers can tell you about it. It will introduce you to all the tools and works without Wi-Fi. And I was surprised it said it automatically saves all my drawings? It hurts. Great job - although I've used the app before, I can say it's improved a lot. When I first got an app, I wasn't really into the art. I am very interested. Ibispiant X is really a great app and I really recommend it. What I really like is that there is a blur tool and blur tool. I never knew how much I would use them, but now I use a lot of blur and blur. The Spamudge tool is really great, I like it's not so aggressive that I don't know exactly how to express it, but I had other applications and there was not the best tool. This would not allow the coverage to be changed, although it did provide an option for instrument size. This is not the case with Ibispiant X. It is really smooth and has a good flow. It is said that if it is smooth, the application does not lag!It's OK. It depends on your internet, but I've noticed with other apps that sometimes the screen freezes or shakes, like the brushes aren't smooth. I also like the truth about the brushes, which are really useful. I love how you can unlock all the brushes by watching the quick ads. Even if it doesn't last forever, I believe in it. I don't really care about anything at the top of the screen. Amazing, as you can see from the folk art, I believe it's a daily note or something. Overall, I'm very happy with the request. I recommend 10/10. One of my hobbies was to test the application drawing and at least 7. Yesterday I understood and already know the functions and it was better for me to work from another place. It's easy to use, free, and only ads are small above or below the screen. No video. It is unbelievable. You get amazing brushes and everything for advertising. And you don't have to spend money to enjoy the Ibispiant range. So it won't disappoint all five stars. (Well, maybe I don't know your style) Edit: It's been quite some time since I first purchased this and first posted my review! Here's a little update on my ideas: always an update! With the eraser and bucket tools, some nasty things have been fixed and all the brushes have been replaced and some added! It's great to see what people need in this app. Photo editing is a simple process rather than photo making or photo shop. Anyway, five stars, I couldn't find any problems with it. However, I think they should add keys that can open or close a feature that works when you leave the setup area and when you exit the drawing or die from the device, the button can't be used. I don't know how these apps work but please do if possible. Developed by IBIS Inc., application protection procedures may include data processing as described below. For more information.
