Imaengine vector app for android

Finally, by popular demand Imangine is back! Most better filters with a smart editor! Vectorizing color filters in pop-art style, black and white for the background removing. IMPORTING VIDEO AND FILM to get video Roto style. user-friendly editor with selection tools, brush, and eraser. Now we have three different vector app, you can choose one suited to your needs: - 'Imaengine': filter section with all the functions of the carrier, with smart controls and clean interface, editor section with only the essential tools. - 'Vector Q': the most powerful and full control over vectivalizzazione with advanced parameters and a full vector editor. - 'Vinilo': the vectorization simpler, only in black and white and single-tool editor. Reviews Imaengine app unusable. Continue crashing. Bought both the vector Q and Imagine. Thank you for having listened to the feedback and putting back the original app in the store! I love this app! It crashed when I tried to use the editor button. You can not save or even Air Drop anything without paying $ 3.99. Disappointed, I downloaded to follow a tutorial and create a project. Lost my download later. © Why this has only three stars? This app is incredible. It's better on the iPad, yes, but you can still do a lot of cool things with it on the phone. APP PURCHASE this one year ago. I have no problem to save the photo of that. Now when I try to save my work in my phone 2.99 Ask to save an image. I had paid for the previous year, but somehow I found myself migrated to vector Q. The previous app produced an automatic crispy track relatively sharp while the vector Q is basically junk to automatic tracking, but tries to be more of a publisher who I do not need or want. So I tried to migrate downloading and restoring the original purchase, but of course the surprise surprise, the recovery purchase will not occur. However, try the old app (without paying for it again), and automatic track it's almost like the vector D. really disappointed. I liked what I was able to do, even a lot of exploration left! A small niggle, though: because © Apple makes the extensions of "whatever," he renamed a JPG file from my phone to JPEG when I shared my iPad .... okay, even if the operating system hides the extensions of user files and will not allow to change them directly! But when I wrote a quick shortcut to open a selected photo from the "Camera Roll" (old terminology) The action failed; It or the system showed an error that states that Imaengine can not handle files with "FileType" unknown ".jpeg". What is stupid? A failure of the flexibility of the sytem. I imagine that the developer must add the JPEG file types as acceptable input. Seriously, a JPEG is a JPG. This was news in 1992? Please add the ability to include files with JPG, JPEG, JPE, and other names for Jay-Pegs !! It would be nice if we could have the chance to nominate the extension of the stored job files (* shared Applese). It would be really nice if we could directly save (* as a share) .jpg .jpeg (or .gif or .pdf, possibly other vector formats). That's a lot to ask, but how is a "creative", the borders are difficult for me .... Thanks for listening now that I had a bit 'of time to spend with vettoreQ, my initial reactions are confirmed. The vettoreQ is not suitable for Iphone. Yes, it has tons of bells and whistles, but the interface is Arcane and uses the way most of .the screen, then it should imagineminare what I need to remember .... Keep it Simple Stupid Kiss Thanks again for this app returns the ã ¢ œ Ã ¢ â ¬ Newa "Imangine which is now available - Still is not Like the old version. The options when betsize donÃ ¢ â,¬ â "¢t becoming crunchy with a good photo. What happened?! If it's not broken, don't fix it! I'm not going to lie when they changed the app like many other users for a long time I have absolutely hated and left a very negative assessment, I really appreciate Luis The Creator listening to our feedback and releasing a separate app what this app Used to be on the App Store :) :) but respect ita doesn't get it often you get what you want! Thank you for keeping the simple version of this application goes !! It is a 5-star application on the whole line for all 3 vector applications. It will support this application through unlocking functionality! Keep It Up Love These applications !!
