Therefore, it is 100% safe to install Control Center iOS 13 - Control Panel Mod APK on our site. Download Accelerated up to 200% with dFast Torrent Cloud™ Enjoy the fastest download service with dFast. dFast App Mod Fast, Download Fast Mi Control Center - Notifications and Quick Actions is phone customization that is being widely used by people around the world today. An extremely convenient application for us to install on mobile devices to manage notifications and manipulate controls quickly. This app can help you better manage your phone, from announcements to related elements on the device. Currently, the application is set up with many modernized functions to bring the best things for you to use. First of all, it will help you change the way you use your phone to become smoother. QUICK ACCESS TO APPS ON THE DEVICE Typically, when we use the phone, we want to click on an application on the screen. It often takes time to find it and see where it is. However, Mi Control Center will completely change the way to use the phone more efficiently and quickly. First of all, the application will set up a control center panel like the iOS operating system and set up the flashlight, photography, calculator, and many other functions. It can be said that it is like a copy of the tools on the phone reduced to a control center. This is very convenient for users, and when you do not unlock the phone, you can use those functions, swipe up from the bottom of the screen, the control center panel will automatically appear. Therefore, it will help users access very quickly and save time. CHOICE OF CUSTOMIZED BACKGROUND TYPES Mi Control Center MOD APK has added a feature that allows users to choose background types as they like to make your phone screen more vivid. Through this feature, you will be able to select uniform colors to display in the control bar. Furthermore, the user takes the base layout and colorizes all the elements according to what you want it to appear. Inside the application, there will be various colors for you to choose from, uniform colors, animation, or still, images are possible. However, it would help if you considered the right colors to protect your eyes. GET IMPORTANT NOTIFICATIONS WHEN THE SCREEN IS OFF First of all, Mi Control Center MOD APK is quite exceptional because you get important notifications when the screen is off. That is, Mi Control Center fully displays all statements to the user. Moreover, when you miss a call or receive a text or email, it will automatically display and light up discreetly to let you know without having to unlock the device. What's even better is that you can optionally not show the message content to prevent others from reading. SET UP NOTICE DISPLAY TIME AND LED LIGHT First of all, users are automatically set when notifications appear or turn off unnecessary notifications in the range of 1 hour, 2 hours, or permanently. If you don't want annoying messages, turn off unimportant notifications and reopen them when you need to. New announcements will light up when new notifications appear. However, some cases include the phone in the pocket, purse, or face down, and the messages will not light up. REPEATED UNREAD NOTICES A plus point for Mi Control Center MOD APK is that when the user has not yet seen the notifications, it will automatically repeat those notifications until you see them. Moreover, users can also directly delete the messages they feel are not suitable for them or put them on a restricted list. Besides, you can also reply to messages directly as soon as the notification appears without having to boot into its primary application. This is a quick message reply feature without going through the last step. CHANGE CUSTOMIZE INTERFACE LAYOUT For devices that do not yet own Mi Control Center, all the tools on the phone are arranged messily and make us sometimes not find it. Moreover, the old father in the application has also been pre-set very easy-to-see and use way. However, if you want to add some new functions to the control bar like screen recording, music player, or any application is possible. But the number of displays on the control center will be limited to a moderate level, so users should consider which functions they often use, then display them there. Besides, users can also freely change their icon designs to circles, squares, gradients, and more. You can change the layout however you want the most. Using this application gives you a lot of conveniences and makes your traditional phone usage more efficient as well. Through this application, controlling the phone and receiving notifications seems to be much more advanced and convenient than the original. Therefore, using this application will be the love of your life and for your mobile device.
