Now you can see what needs to be overlooked from the Android device to the Samsung TV's big screen based on the user experience. You can send content from Android to TV using local apps. Other multimedia streaming devices used to convert the TV into a streaming screen are Amazon Firetv Stick and ScreenBeam Mini2. If your TV does not support built-in apps, you can enjoy the Android screen on the TV via AirDroid Cast. The AirDroid Cast allows you to overdo the Android screen on the TV using a web browser and AirDroid Cast software on your Android phone. Why can't I stream on TV from my Android device? If you have problems with the built-in Chromecast device, broadcast your Android screen on your TV. Make sure you are using an updated version of Google Cast receiver 1.33 or later. How to update Google Cast receiver on Android TV? You can update your Google Cast receiver by signing up for Google Play on your Android TV. Select my apps-> Google Cast receiver> Update. Why is my broadcast screen not working? You can repair the send screen by turning on and off for 1 minute, including the Chromecast device, phone, Wi-Fi router and Chromecast receiver. The small screen of your Android phone is not for online classes or online fitness classesZoom in. Instead of squinting to see what's going on, you can magically mirror or mirror your phone screen to a nearby TV with a few taps. You will need the right equipment to complete the task, but this will save you potential neck strain. Or showing everyone the latest Tiktok trend you can't get enough of. The best part? Maybe you already have everything you need. Otherwise, the configuration is not very expensive. Here's how you can start mirroring or sending content from your Android phone or tablet to your TV. A Google Chromecast with Google TV or an older Chromecast device is all you need to mirror your Android device. Android phone To run the TV, you need a phone or tablet with Android version 5.0 or higher. This version of Android was released in 2014, so your phone or tablet probably has a newer version of Android. You can check by opening the Settings app and going to your phone and searching for the Android version. A TV with a smart display such as a built-in chromecast or Google Nest Hub. If you're not sure if your TV supports Chromecast, the best way to check is to see if it shows up as a suitable sending device when you use one of the methods below. Screen mirroring is built into the home app. » Screenshot: Jason Cipriani/CNET Casts Screen to TV Using Google Home App The most reliable and consistent way to mirror an Android phone's screen is to use Google Home. If you've ever configured one of the Google Smart speakers, Nest WiFi, or Chromecast, you probably already have it installed. You can also download it from Play Store. Open your home app and select the Chromecast device you want to use. A marked button will appear at the bottom of the screen, discard the screen; Print. You need to accept a prompt reminding you that everything on your phone screen can be seen by everyone in the room. You may also see a second warning if your device is not optimized for replication. I had no problem mirroring the screen when faced with the warning. Click the Stop button to stop the screen projection.The house application has a connection: almost parameter panel. Jason Cipriani / Cnet's screenshot is a easier way because the phone is not much work, but there is an even easier way: use a form plate to use a form connection. Scroll down to the quick setting field on the top of the screen or tablet of the Android phone. The screen should be observed if you cannot find it. You may need to touch the pencil symbol to change what it is and not in the fast setting field. As soon as the screen flow button is found, select it and select the device on which you want to reflect the screen from the list. This can take a few seconds to connect the phone to the Chromecast device. However, if the screen is displayed on TV. Stop repeating the same steps that we have just described. Would you like to show your photos? Respect the screen. Juan Garzon / CNET, but here is the matter: Not all phones have a quick setting. We don't know why, but if your phone does not have a quick option, don't give up. You can reflect your phone with a household application at any time. Do not forget when it reflects the screen, everything and everything that is displayed on the screen or tablet screen is also displayed on the television. This means that all warnings and news and their content are transferred to everyone. I suggest that I do not disturb the reduction in the interruptions. If your phone and television can be delayed, also follow the slower games and avoid more intensive names. Google Assistant has a tip that you want to remember if you have blocked a song in your head next time. Play now: look at this: surprising Android tips that the iPhone cannot
