You can only develop this application without using a database. But I don't like without online database connection. Wait so you don't get confused. I simplify it. Android app App without online database connection. In this project, you don't need to connect your Android app to an online database. It will be easier for a beginner and I don't like it. Because you have to clear a limited number of questions. When a user installs their application. Your hands are out of control. Android application An application with a database connection. This will benefit last year's Android project and will be somewhat important. This Android project will have two interfaces for your app Application interface and web application interface. The Android app will connect to the web app. You can send your information (content, messages or questions) to any Android app installed in your client's application over the Internet. This gives you the freedom to update new questions and quiz categories. A Reminder Android Project App This is the coolest and my favorite app suggestion for a newbie. You don't need any database programming to complete this project. Knowledge of pure Android API is enough. A There are many examples of great reminder apps on the Google Play Store. You can find it there and try it on your smartphone or tablet. I believe that perfection never exists. Look at the example and consider the weaknesses and improve these weaknesses in your program. Your Android app will be better. A smart messaging app I think you have heard of WhatsApp. Wander. It comes with a smart notification app. You can also create such an app for your Android project last year. You can add features to the app according to your needs. Let me talk to you about an important matter. One day I was talking with my friends. They advised me to create a personal version of WhatsApp. I built it and gave it to my friend and we are using it and enjoying it. You might think it's a stupid idea to create the same thing again. But I do not think so. "I just want to create something that makes me happy. how I Provide the functionality of my app: a unique conversation, group group. You can share any type of file up to 100 MB. Instant chat. Ringtone notification when someone calls you. voice chat I'm improving it daily. I may release it in the near future, but we have no plans to release it now. Try creating your own. When you encounter a problem. Android Project Locker App Storage Android Project Locker App Idea is a very good idea if you can create a quality and secure app. We don't like to share our smartphones with our friends. But sometimes when your best friend asks for your phone, you just can't say no. We all have private things or things we don't want to share. In this case, the app lock appears. There are many good app lockers on the market. But you can make your own. This Android project can have the following features. Lock one app. Lock Group Program. Block a private website. capture model. facial recognition lock. location lock. Recovery method to reset the password. dictionaryProject I think I don't have to tell you anything. You may know him. But if I am writing this post about the Android project idea. It is my duty to tell you all about it. The Android Project Dictionary is the easiest project you can make. But if you increase the features of your application. It will be complicated. Android Dictionary Functionality Project: Add new words. Update new words. Delete existing words. Easy search option. Update new words. Option to report a bug. Have you heard of Amazon? What is Amazon? I think most of you can answer. My answer: Amazon is the largest online sales site. Where you can buy different types of goods at low prices and easy. You might think why am I talking about this here. Keep calm and listen, I never waste time. I discuss it here so you can see what I mean. In 2014, mobile phone usage increased significantly. That's why companies like Amazon are targeting mobile users. Therefore, they developed an Android application for their e-commerce website to cater to these customers. You can also create your own Android project in the Android online shopping system. You can sell goods and services using an Android application. It looks exciting, do it. Add a new product. Edit new product. Easy product evaluation. Database of live products online. Some features of this Android project are: Pin on main screen. Block/unblock notes. Share your work with your friends. Import/Export Notes. Image Notes. Course Recommendation Android Project Course Recommendation App is a unique app idea for your senior year. The especially for universities and colleges where the student is free to choose the subject. As far as I know, this Android design idea is not applicable in Indian University. Let's see how the future plans of the Android project will change the modern world. Android Civil Administration Reporting System: Android application that makes the administration faster and more efficient. As government becomes faster and smarter, it will be easier for people to navigate the roads and access various government services. The Android application will remove barriers and accelerate development. The civil administration android reporting system can help the administration to better control traffic, waterways and power grids. The department can access individual lists, reports and charts through a single app on their phones. Smart Health Consulting Android System: Android application for the medical industry that can register various medical centers in the country and provide information at the central level. Android based request for all medical centers; Not only will people be able to get better information, but also the government will be able to provide better services to people. A smart Android health consultation system that can gather all medical institutions under one roof, help people find an affordable doctor and make the right choice. Such Android design ideas will empower people and make life easier. In emergencies and accidents, people will be able to find out which hospital has a free bed and run to it immediately. Manage your Android PC over the Internet. This idea will be widely adopted once it is implemented. The world has become lazy and everyone is looking forward to accessing all the information and services on their phone instead of their PC or laptop. With the Android PC Web Control application, people will be able to access all their data from their phone, tablet and laptop on one device that will act as a file explorer. Android Password Remote Door Opener: Take your security to the next level with Android Password Remote Door Opener. Homeowners can have an Android app that allows them to open doors, gates and control access to windows. This will not only limit unauthorized entry, but also increase the sense of security.Among peers. Students and developers will have to work hard on these Android project ideas to realize it. Hard work will pay off as people are always looking for the best security features in today's world. Android Pets and Entertainers: Pets Feeder Integrated with Android App is one of the most popular Android project ideas. People all over the world worry about their pets at work. A new Android app integrated with the pet feeder gives people a live stream of dogs and allows them to interact with them. The world of dog and dog lovers will become much better when the idea behind this Android project is realized. This Android app can also control the power provided by the PET. Android Law System Project: This is one of the rare Android project ideas that can be implemented according to many templates. This can be done for administration, but the other can do it for people. Android application for authorities that allow them to find everything related to one person and his reputation of a similar law. While another developer can create an application that helps people search, find, read and understand laws, terms and semantics. This application will not only save management time for research, but also help people live in a more conscious and aware world. With the following Android app for people; Discrimination and corruption in the police will see a new minimum. Wi-Fi Library Locator Project: Connect to a Wi-Fi library, enter the title of the book you're looking for, and determine its location on your phone. Students, teachers and lab assistants will have a great time using this awesome Android app. This is one of the few Android project ideas that can be developed in student years and implemented. People will have a great time using this app because finding one book among millions is obviously a huge task. Android vehicle tracking device. Vehicle tracking app for android will break the parking system. The appearance of new and efficient applications in an old and degraded system is obsolete; Which is really good for the world. With the help of railway vehicle tracking app, people will be able to easily locate their vehicles and track the route on their phones to find their own vehicle in the real parking lot. This one application will solve a big parking problem in huge offices, shopping malls and public places. In addition, the application will provide people with information about empty places. Android Circuit Breaker: This is definitely one of the most futuristic ideas for the Android project. Android Circuit Breaker is a solution to every electrical fault in the world. You can use your Android phones to interrupt electrical circuits when they feel that something is wrong with an electric connection. The Android application for interrupting electrical circuits will save many lives and property. Android voting system: solving an eternal problem using technology; Voting system that prevents people from visiting the cabins to vote. The Android voting system will not only help the government better manage elections, but also will change the way companies operate. Universities can also optionally use such a system for pre-election campaigns. There will be more fun and less trouble. Android Blood Bank: centralizing all services is one of the best ways to solve problems. Creating a blood bank for Android, which solves blood availability problems, can help save lives. Whether there is blood or not, and if so, from which blood bank we can always check. This is one of the best ideas for work and implementation, because the world needs it very much. Home automation with Android: Because people work more than ever, free time is getting shorter. People are constantly tired and rely on technology to do their work. Home automation with Android allows people to open windows, close the door, control the air conditioner's temperature and turn the TV out of the bed. People will be able to do everything on their Android phones without getting out of bed. This is definitely the future of real estate management. Android Local Train Ticket Project: Android Local Train Ticket Project will help people easily book tickets to the metro and other local trains. Effective application management limits queues at stations and parking lots. People can book tickets on the run and save a lot of time. This is definitely one of the most needed ideas for the Android project to implement. Android controlled cars: a huge jump for fewer industries. Thanks to the Android controlled vehicle, we can manage the operation better. Android manager must use the app and prevent industrial vehicles and complete the job. It can be assigned to private projects and can be used to reduce the workforce or recruit drivers. Student Faculty Document Sharing Android App: We put the power in the hands of students with this app. The peer-to-peer system between students and teachers not only promotes better communication, but also allows users to make the most of the opportunity and help students effectively. Students and lecturers can exchange documents in time and reduce physical effort. Android Antenna Positioning System: This application will have many projections. Developers can create an Android app that allows operators to set the orientation of the antenna without touching it, and can also help users identify the current position of the antenna and manage the spectrum accordingly. This is one of the toughest Android project ideas to work on if you are in your final year as an engineer. This project will help students get good grades and freshmen will cast impressive shadow on their bosses. ARM Robotics Project on Android Platform: Robotics has found a lost brother in Android apps. Together, robotics and Android apps will help people realize their dream projects. Challenges are drastically limited. In fact, android apps can be used to pick and place robotic arms and enjoy a real robotic experience. A better mechanical world is just around the corner. Android Controlled DC Motor Speed: The industry welcomes Android applications with an open heart. People love to use these android apps to manage their business and industry better. Android controlled DC motor speed is as ambitious and difficult as it sounds. One can always rely on Android apps to control engine speed and increase production speed in their industries. Android spy bot with spy camera: Media companies and government can effectively use android spy bot with spy cameras to root out criminals and corrupt politicians. With this app, the best speed manager and direction controller can always be accessed to get a better view of the target area. This Android project will help developersBecause it will solve many problems. Android controlled railway crossings: Railway crossings are one of the most dangerous crossings in the world. The administration can finally manage these railway crossings. With Android controlled level crossings, app operators will be able to easily close and open during trains. This application will reduce the number of accidents and help people lead an easier life. Stri Phrase Framer Android Application: People in the modern world find this application really useful because it helps them say more and get less text. An Android app offering any phrase you can imagine. This app will make people addicted. Life will be easier from here. Medical Search System Project: An Android application integrated with a national database to help people find and use the nearest medical institutions. These requests will lead to a sharp reduction in the number of people who die due to lack of medical services or assistance. Now people can find medical services in NH and visit this place in near future to get medical care. Android Inventory Tracker: All industries and commercial businesses will like this Android project idea because of the efficiency that it increases their sales. Now you can track your inventory in real-time and provide real-time updates to your customers. This will change how the service sector works for the better. With the help of this system, the company will earn profit. Internal wireless location system. Replacing the Grumpy Walkie-Talkie, this new system will help people communicate easily in college towns. This system alone will enable people to achieve more and more. This is one of those rare Android project ideas with real marketing power that can bring in thousands of dollars in income. Wireless internal positioning system is the future and the best management. Why Android will remain the market leader? With simplified apps that allow people to enjoy the best services, people want more and more. Demand is causing developers and engineers to come up with amazing new ideas. The change that is starting to trickle down is helping pleopletheir business better. With the growing demand, there are also a growing number of Android apps that help people live easier lives. There will be many more such Android apps soon. Money management, ticket booking, and emergency calls are some of the best examples that upcoming Android projects will help us with. Contact me for Android app development. Android project help, I am always at your service. I have worked on many student projects and in real time; You can find their reviews here. Here.
