Symbols on android phone screen

What do the symbols on android mean. What are the symbols on my phone screen. What are the symbols on android phone.

From the Wiki Android, especially when using a new Android device, after software updates or installing a new app, you can recognize new symbols or signs in the notification bar from which you don't know the meaning yet. The following list will give you an overview of some of these icons and their meanings, as well as an app generates them (if they are created by an app). The visible icons in this list may differ depending on the manufacturer and the device, as well as the ROM installed; However, in general they should, at least, seem like one with each other or are completely the same. Symbol Meaning / Definition Displays that the volume of the device is set to "Vibration only". [1] The device is set in silent mode and will not emit any notification sound. The mobile data is enabled and the device is currently in the GPRS network. [2] Mobile data is enabled and the device is currently in the LTE / 4G network. 4G and LTE are used as synonyms, depending on the device mark, what is shown. This symbol indicates that the device is currently connected to a mobile network and displays the signal strength (relative as bars). The device is currently not connected to a mobile network, eg. Because the network operator does not cover it in this area or the SIM card is deactivated. [3] The device is connected to another mobile network, but not to that of your operator and use Roaming. [4] There is no SIM card connected to the device or the device cannot correctly recognize the SIM card. The Booster Download function is enabled. WiFi is activated and connected to a WiFi network. The symbol indicates that the WiFi call is enabled [5] WiFi connection is interrupted. Which can have several reasons :: Due to bad Wifi force you don't get an assigned IP address or the DHCP server is incorrect, the DNS server cannot solve domain names or is not reachable "No internet": the Google server is not reachable NFC on the device is enabled. Bluetooth is enabled. There is an update available for device software. [6] The USB debugging is enabled and the device connected to a computer currently. [7] At least one alarm is configured, implemented and will be activated at the time configured. The symbol shows the battery charge status. Furthermore, the device is charged at the moment. A screenshot from the display was successfully created. Touching the line in the notification area will open the image in the default image viewer. As above, however, the exclamation mark signals, which the image cannot be saved, eg. Due to the missing storage space on the device or on the app it can block screenshot screenshots from it (A.G. app banking apps). (Samsung devices only with a S-PEN notification), which the pen has been removed from the support. The private mode is enabled (files, which have been moved in private are visible now). The mode does not disturb (DND) is enabled. The device mode is enabled. There are other new notifications / not read as the system is able to show in the notification bar. Adymentalational notifications can be displayed by sliding the notification bar to open the notification area. [8] (Sommasung Devices Only) The Samsung Smartstay function is enabled. [9] The Shazam musical recognition app added a notification to the notification bar (as announcements, graphics, ...) This symbol was created by the powerful control of the app [10] The Audioscrobbler function is enabled In at least one app (last .FM, Spotify Å € for example). [11] Notifications are, e.g. In the Settings or in the rapid settings bar, disabled / locked. [12] App updates have been installed automatically via Google Play Store. The internal storage of the Fully. [13] The AppÅ € Avast Mobile Security & AntiVirus Å € is doing something in the background (scan file, E.G.). Since Android-5000! 5000! 5.0 "Lollipop" Å, this symbol notifies that there is an active root session. [14] The symbol informs you that the device, as well as the mobile network with You are connected, it supports the voice to LTE (times). Playback (E.G. Music) is supported by Dolbyaudio (currently only the HTC One M9 as a substitute for BeatSaudio). The app-tasker is active (which does not necessarily mean, that even the profiles are activated, you can find out by opening the notification area by sliding down from the notification bar). The help of the option option is enabled (App Telephone -> Settings -> Call settings -> Acoustic Help) [15] Android recognized to, that one (new or another) SD card has been inserted in the device, which is currently prepared to be usable. The symbol automatically disappears, once the card is successfully incorporated and can be used. The device currently is in the mode so called Lights Out and Duls, E.G., Software buttons and notifications in the notification bar. [16] [17] An app is currently requesting the current position, which is currently accumulated by the device (using GPS or WiFi depending on the settings). Kaspersky Antivirus & Security [18] Norton AntiVirus & Sicherheit [19] Sony Xperia App Themes [20] Sony Xperia Tips App [21] Rich Communication Suite (RCS) - Joyn [22] on Samsung devices You can find the Advanced option Calling & messages in the settings following the path connections -> Additional connection settings and enable / disabled RCS, something like a successor for SMS. [23] [24] Å. For all other devices you can search for a Joyn call or message + that can be deactivated / uninstalled to get rid of this symbol. Data savings is enabled. To disable: Settings - Using data - Data Saver Reduces data usage by optimizing Prosed pages on Google-Server. App Pinterest Message, which "the network can be monitored" from a third unknown part, which is also visible when opening the rapid settings bar. The most likely reason for this message is that the user has installed a CA root certificate to the trusted "User" store of trusted certified authorities. Connections, which use certificates from this CA, can be used for man-in-the-medium attacks. [25] The device is connected to another device using WiFi Direct. [26] Lenovo Smart Switch is active using the custom profile. [27] Indicates, that there are current apps on the background that can affect the battery life. [28] Automatic screen rotation has returned. The device will remain in vertical mode, regardless of the currency. [29] The mirroring of the Chromecast screen is active and some content are stood on another screen right now. [30] Indicates that a headphone is connected to the device.
