9. IDENTIFICATION NUMBER Identification number		10. IDENTIFICATION NUMBER Identification number	

Aphis form 7001 continuation. How to fill out aphis form 7001. Aphis form 7001 spanish.

Information for Accredited Veterinarians It is important for accredited veterinarians to check the receiving state's requirements prior to issuing a CVI, as each state has different import requirements for different species. There may be more than one regulatory body that has jurisdiction over animal imports and exports, so it is important to not only review the regulations for the State of Alaska, but also for any country or state that you are traveling in or plan to transport animals into or out of. Species Health Certificate / CVI Importation Permit Additional Testing or Certification Requirements Intra-State Movement Permit Equine (Horse) X X X Cattle, Bison, Yak X X X Goat X X X Sheep X X X Swine (Pig) X X X Dog/Cat/Ferret From a Rabies Quarantine Area X X X Dog/Cat/Ferret From a Rabies Quarantine Area X X Poultry or Hatching Eggs X X X Cervid (Reindeer, Elk) X X X Camelid (Camel) X X X Note: Anyone importing animals for Direct or Immediate Slaughter must contact the Office of the State Veterinarian directly at 907-735-9215 to request an import permit. Banners will either be green or orange with explanations for how documents are processed (either fully digital or digitally endorsed with hard copy processes). Whether moving overseas or returning to the United States on official U.S. government orders, pet owners need to determine an airline carrier's pet policies on live animals as excess baggage, cargo, and in-cabin before booking your pet. Pet owners also need to determine which carrier has the contract for their travel route and what the expenses will be. There have been cases where a country does not require a certificate, but a particular airline does. Please check out the DOT form for more details. Airlines may also require additional forms. The eCVI and electronic import permit system is still relatively new. As of April 29, 2020, Endorsement of pet health forms is now a 100% electronic through the Veterinary Export Health Certification System (VEHCS). OBC recommends that you request written confirmation of reservations you make for the shipment of your pet. Check with your local pet store or any online retailer that offers specifically ISO standard 11784 and 11785-compliant microchips. Accredited vets are required to submit copies of health certificates they issue to the appropriate animal health officials in both the issuing state and the receiving state. There are three ways you can ship your pet via the airlines: Your pet can travel on the plane with you (either in-cabin, as accompanied baggage, or as cargo). Your pet will be charged accordingly. Note: A hard copy of the APHIS-endorsed veterinary export health certificate must travel with the animal during the export process. Shipping a Pet Overseas from the United States The Overseas Briefing Center provides country-specific pet information for the foreign affairs community assigned to a U.S. embassy or consulate abroad. We encourage pet owners to review carefully their travel plans for upcoming international moves. Importation Permit Permits can be obtained online using our Animal Tracking System, or by calling our office at 907-375-9215. Some countries do not permit importation or have long quarantine requirements. The information below provides only general guidelines. Indicates an external site. Refer to the eCVI tutorial for step-by-step instructions about how to use this system. U.S. government employees or family members may contact the Overseas Briefing Center for information on airline restrictions. Alternatively, there are several online platforms that can be used including GlobalVetLink, Vet Sentry, SmartCVI-New Planet Technologies; and AgConnect. There is a USDA endorsement fee per certificate for cats and dogs. It is the responsibility of the accredited veterinarian to ensure that vaccines are given within required time frames, the required statements and test results are included on the certificate, and that the CVI is submitted promptly. You can have your pet shipped through a licensed commercial shipper. You will be charged the cargo rate plus the pet shipper's fee. If your pet must be shipped as cargo using a commercial shipper, contact one early in the moving process, using IPATA. Many airlines now require this method unless your pet is small enough to fit in the cabin. Arrange with your veterinarian for required shots and certificates within the specified time period. International Pet Travel on American Carriers The information below pertains to cats and dogs. Airline policies regarding other pets may vary. Contact the airlines directly for additional information. Alaska's animal importation requirements vary by species, and in some cases by the age and sex of the animal. Travel Through Canada If animals will be transported through Canada additional requirements may apply. Check directly with the airline. EU transponders do NOT read non-ISO microchips. For the general public traveling outside the United States with pets Review the International Animal Export Regulations , provided by the U.S. Department of Agriculture - Animal Plant and Health Inspection Service (USDA-APHIS). Decisions about what diseases to test for and the requirements for animals coming into Alaska are based on scientific study and risk analysis. Some countries, however, require a health certificate to be even less than 10 days. The ISO Microchip If assigned to an EU or non-EU country that requires an ISO microchip, determine if your veterinary clinic carries ISO-compliant microchips known as ISO microchip standards 11784 and 11785. Call the appropriate embassy in Washington, DC to confirm the entry requirements for the country you are moving to. For other types of pets, check the USDA site below or email CustomerServiceCallCenter@aphis.usda.gov. Accredited veterinarians in Alaska can submit hard copies or email to completed CVIs to the appropriate animal health officials, but it is also possible to create an electronic CVI (eCVI) online using our Animal Tracking System. Review all considerations with the airline and, if necessary, the pet shipper you plan to use. The travel policies of U.S. airlines with regard to shipping animals are subject to change at any time. As a rule, animals 100 lbs. However, most countries require that your pet be checked by a federally-accredited veterinarian and that a United States Interstate and International Certificate of Health Examination for Small Animals (7001 USDA-APHIS Form) be issued by that veterinarian and endorsed by the USDA. Check the airline you will be using for your pet. The eCVI system is free of charge for Alaska veterinarians, or larger (including the weight of the cage) will be charged as cargo even if they travel on the same plane as you. As you become familiar with these tools, we welcome your comments and suggestions to help make our system more user friendly. Electronic APHIS Form 7001 No Longer Accepted The majority of states, including Alaska, are no longer accepting the electronic Animal and Plant Health Inspection Service (APHIS) Form 7001, United States Interstate and International Certificate of Health Examination for Small Animals for small animal imports. The certificates are authenticated by the Department of State's Office of Authentications 600 19th Street, NW Washington, DC 20006 Tel: 202-485-8000 or 1-800-333-4636 and then press 5 Fax: (202) 663-3636 rule. Refer to the permit tutorial for step-by-step information about how to fill out the permit application. The timetable for examination statements and certifications can be very tight. Plan well in advance to be sure all paperwork is complete in time for your shipping date. State-issued certificate forms are accepted. The following websites may have additional helpful information: Service Dog Registration of America (SDRA) | VetDogs.org Worldwide Import and Quarantine Restrictions For U.S. government employees and family members ONLY Visit our e-mail the Overseas Briefing Center (OBC) to inquire about entry requirements for your post assignment. A few countries simply require the veterinarian who examines your pet to be licensed in the state of origin, and no USDA endorsement of the veterinarian's examination statement is required. For more information and printable fact sheets, please see the State of Alaska's Animal Health Regulations, or visit our Livestock and Horse Import/Export or Pet Import/Export webpages. NOTE: More than one dog or cat may be on a certificate. Check the requirements to see how close to departure the required veterinarian examination, inoculations, and tests must be scheduled. Importation requirements are in place to protect animal health, environmental health, and public health. At this time all states are still accepting the multi-page carbon copy APHIS Form 7001, as well as hard copies of comparable forms issued by the state of origin. Contact your state veterinarian directly to see what options they have. If your veterinary clinic does not carry ISO microchips, you may purchase one from the Pet Travel Store and bring it to your vet for insertion. Traveling with a Service Animal Check the following updated website as of Dec. Some airlines no longer offer this option and some countries do not allow pets to enter the country in-cabin. Notify the post once you have your assignment that you will be bringing pets(s) and what kind. Certification Requirements Pet owners should first visit the U.S. Department of Agriculture - Animal and Plant Inspection Service (USDA-APHIS) website to review country requirements for pet arrival. Pet certification requirements vary from country to country. Once the certificate is created, it can be printed, signed, and then scanned and e-mailed to the State Veterinarian. This applies both when animals are transported domestically, and when an international health certificate has been issued for travel through Canada. 2, 2020: U.S. Department of Transportation Announces Final Rule on Traveling by Air with Service Animals. The rule indicates only trained service animals that assist owners with either physical or psychiatric disabilities will be allowed to travel in the cabin free of charge. For information on how to bring your pet into the United States, please visit OBC's Returning to the United States with Pets and USDA-APHIS Bring your pet into the United States from a foreign country (Import) webpages. Check with the embassy before arrival. Health Certificate/Certificate of Veterinary Inspection (CVI) Most animals being exported from Alaska need a health certificate, often called a Certificate of Veterinary Inspection (CVI), issued by an accredited veterinarian. Check with the airline if your pet is close to that weight and to determine if the airline policy may vary from this general 100 lb. Emotional support animals will no longer receive the same entitlement. U.S. Airline Pet Policies Typically, airlines require pet health certificates that are no older than 10 days, even if the receiving country accepts an older one. Below is a quick guide to the requirements for each species of animal. Some embassies will provide forms printed in English and in the host language for your veterinarian to complete. Authentication of the USDA Certificate Authentication of the USDA certificate forms may be required by the country to which you will be traveling with your pet. In Alaska, that often means coordinating with the USDA and Canadian officials, if you are moving animals by land through Canada. You can book your pet on a separate flight. You will be charged the cargo rate, which is considerably more than excess baggage. However, most airlines no longer allow pet owners to book their pets directly with the airline as cargo. The requirement for ISO microchips is becoming more prevalent worldwide. Microchips should always be implanted prior to administering the required rabies booster. For more information visit the USDA APHIS Import and Export: Animal and Animal Products webpage or the Canadian Food Inspection Agency Import Policies: Live Animals webpage. How does the process work? First, for your assigned country, check the U.S. Department of Agriculture - Animal and Plant Inspection Service (USDA-APHIS) site and look for a colored banner at the top of each country page. Many states have either paper health certificates or an on-line platform for veterinarians accredited in their state.
