Writing Quantitative Research Reports:
A 4-Week Power Program

Foundations for Research Success (5 hours of class time)

Learn how to write a great quantitative market research report, even if you are new to report writing.

What makes for a great quantitative research report? It needs to synthesize and present survey research findings in a way that your audience will find useful and memorable. You want your audience to understand and retain key research findings and to maximize the chance they will put them to use.

The options for interpreting, synthesizing and reporting quantitative data are taught here in a fun, practical way.

In this 4-Week Power Program, students learn how to interpret quantitative data in order to address project objectives, and how to report the findings using various text, visual display and even multimedia approaches. NOTE: this class includes homework assignments, and students should be prepared to spend one hour per week on homework.

Notes:

- This class does not include how to conduct Quantitative Data Analysis, that is a separate class titled, "Introduction to Quantitative Data Analysis."
- This class teaches a PowerPoint approach to reporting.
- Prerequisite: At least two years of market research professional experience OR completion of [Market Research Project Management](#).

Day 1 (90 minutes): Start With a Plan	• Drafting a reporting plan and schedule
	• Prioritizing project objectives
	• Anatomy of a quantitative report main sections, order of sections
	• Planning for modularity
	• Working with templates

Country Overview Report: Nepal

Background Information: Nepal is a landlocked country in South Asia. It is bordered by China to the north and India to the south, east, and west. The country is a federal democratic republic with a multi-party system.

Government: Nepal is a federal democratic republic. The executive branch is headed by the President, who is elected for a five-year term. The Prime Minister is the head of government.

Economy: Nepal's economy is primarily agricultural, with a significant informal sector. The country has a low GDP per capita and is considered a developing nation.

Society: Nepal is a multi-ethnic and multi-religious country. The majority of the population is Hindu, but there are also significant Buddhist, Muslim, and Christian communities.

Infrastructure: Nepal has a mountainous terrain, which makes infrastructure development challenging. The country has a growing road network and a limited air and rail system.

Environment: Nepal is a biodiversity hotspot, with a wide range of ecosystems and species. It is also a major source of hydropower energy.

An Example of a Research Proposal

Economic models for peace, growth and poverty alleviation and resolution of conflict in Nepal, July 2010-July 2011

Poverty and inequality in Nepal has increased substantially in the last two decades. Major reasons for this are the failure of the economy to grow because of internal conflict and political instability. As a result of the lack of employment prospects in the country thousands of young people are forced to migrate abroad and economy has lost manpower that could actively contribute to the growth process. Nepal's performance has been dismal compared to neighboring countries in terms of per capita income either in market prices or in PPP terms.

The study has three major objectives:

- (a) To measure the depth of poverty and patterns of inequality in the distribution of income in Nepal based on most up to date household level information.
- (b) To find a mechanism that can help alleviating poverty in Nepal within a shortest possible time period.
- (c) To provide a thorough comparison of successes and failures of poverty reduction strategies in South Asia, and possibly also from other regions.

Literature review: Impact of Political Conflict on Poverty and Income Inequality

Available documents on poverty from the National Planning Commission of Nepal, Ministry of Finance and Central Bureau of Statistics explains the poverty situation in Nepal are not up to date. Reports of international agencies such as the World Bank or the Asian Development Bank are helpful but very general and outdated particularly in the current context of conflict. Many surveys and sector level studies in India could be relevant but have not been properly accounted for while analyzing poverty and income inequality studies in Nepal.

Executive Summary

At the request of the Minister of Revenue, Inland Revenue in partnership with Treasury, are looking at ways to reduce the compliance costs of small businesses. As part of a wider consultation process, Inland Revenue have commissioned **colmar brunton** to undertake both qualitative and quantitative research with businesses and tax agents to seek their input. This report presents the findings of the quantitative research.

Telephone surveys of 1611 small businesses and 400 tax agents were conducted between 25 November and 13 December 2002. The maximum margins of error at a total sample level are +/-2.4% and +/-4.9% respectively.

A summary of the salient points is provided below:

Current practices

- 82% of the research participants in this research use a tax agent. Businesses most commonly use the services of tax agents for filing end of year income returns (80%), ahead of filing GST returns (19%), filing FBT returns (17%), advice only (15%) and filing employer monthly schedules (8%).
- Reasons why businesses use a tax agent for filing employer monthly schedules and GST returns most commonly relate to issues of convenience (e.g. saving time) as well as the expertise and/or perceived lack of expertise of the business.
- Among quarterly FBT filers, 44% are aware that they use the flat rate calculation, 18% know that they use the full multi-rate calculation and 3% know that they use the short form multi-rate calculation; 13% know that they use the multi-rate but are not sure which form and 22% don't know what calculation they use.

Payroll practices

- 10% of small employers use a payroll company or tax agent to process their PAYE. Small employers that don't use a payroll company generally do not feel they have enough employees for it to be worthwhile (39%) or feel it is easy to do themselves (38%); cost is an issue for 19%.
- 19% of small employers use a payroll package.
- Direct credit is the most common payment method among small employers (61%); 31% pay by cheque.

Compliance costs

- Inland Revenue is the government department considered to have the greatest impact on businesses in terms of compliance costs (70% of businesses name Inland Revenue as the biggest impact and 15% as the second biggest impact). ACC ranks second in terms of compliance costs; 12% consider them to have the biggest impact and 46% the second biggest impact.

EXECUTIVE SUMMARY/SUMMARY OF FINDINGS

Chapter 1: Introduction¹

(maximum 3–5 pages)

- **Background to the study:** why, when and how the study was started
- **Conceptual framework:** understanding of gender as a relational and ecological framework for understanding violence against women and the concept of masculinities
- **Literature review:** national and regional literature on violence against women (this should be kept brief but more information can be shared as an appendix if required); reference to specific literature to compare with research results should be included in the relevant 'discussion' sections
- **National context:** general country background, such as demographics, status of women, gender norms, legislative framework, responses to violence against women and other relevant issues such as conflict and post-conflict history
- **Study objectives:** study objectives and research questions
- **Organization of the study:** the organization of the research team, partners, the national working group members, donors and providers of regional support

Chapter 2: Methodology

(maximum 3–5 pages)

- **Study design:** briefly describe the overall methodology of the research
- **Sample design:** describe the sample design and study sites (include a map); annexes can be added for more detail on the sampling methodology
- **Definitions:** operational definitions of different types of violence and other relevant variables (wording of questions in questionnaire); specific measurements can be included as text boxes in relevant chapters
- **Questionnaire development:** briefly describe the process of consultation, adaptation and translation of the Core Men's Questionnaire of the United Nations Multi-Country Study on Men and Violence to the local context
- **Questionnaire structure:** outline the structure and sections and how the questionnaire was designed to maximize disclosure
- **Interviewer training and fieldwork:** describe interviewer selection and training process, including what was covered in training and piloting and the fieldwork procedures and any quality-control mechanisms
- **Data handling and analysis:** if PDAs were used, describe the reasons for their use and how they were used; describe how the data were analysed
- **Ethics and safety:** outline the ethical considerations and safety standards that were used, including voluntary participation, informed consent, confidentiality, private interviews, PDA use (or another method) for most sensitive questions, etc.
- **Strengths and limitations of the study:** outline the generic methodological limitations and strengths, as well as particular country specific limitations of the study

Why is it important to know variables? What is descriptive research? It is in a conclusive nature, contrary to exploration. Choose a structure to write about quantitative research as well as its delivery of the message to readers, reflect on its type. Know that you can write the search by describing, comparing and reporting the collected data. 1. A Quantitative and qualitative research formats: 295 kbDownload2. 2 Quantitative Research Report FormatSizeFile: 102 KBDownload3. This way, you can find a process in organizing the content of the search. Otherwise, it might mislead your project.4. Select the search for quantitative research makes it easy to understand. However, used correctly, it can help an organization to better define and measure the meaning of something on a group of respondents and the population they represent. When it comes to detecting online, descriptive is by far the most commonly used form of research. In fact, it has an impact on our everyday problems. It is important because it provides details that influence decision making for people and organizations, they say that some questions are better left unresponsive. But when it comes to finding the right solutions, the marketing industry uses few quantitative research methodologies to influence their businesses. Do not consider variables means neglecting a factor that can guide you through the project. When it comes to a more structured collection of data, results analysts use quantitative research since it generates numerical statistics from a wider population of respondents. DetailedFile FormatSize: 37 KBDownload5. Answers are an essential part of our lives. Consider a survey that asks customers to rate their satisfaction with a hotel on a scale of 0-10. With properly defined research objectives youcAAAl be able to create aA QuestionnaireA Athat provides relevant insights that give a clear direction towards action.The next step to effective descriptive research is to ensure your resultscAAA accuracy. Find out below. In the case of online surveying, your collected data should allow you to take action on a particular problem or opportunity facing your organization. Second, stick to the variables and other elements involved in the project. It encourages everyone to remain curious and look for proof that makes life easier on the go. Remember that you are looking for answers that are based on facts and real-time results. This information could then be studied at face value, measuring trends over time, or for more advanced data analysis like drawing correlations, segmentation,A Benchmarking, and other statistical techniques.The trick to conducting any type of research is to gain only valuable information. Think of a topic that will not bore you and your team as you try to complete the research project. To understand what your research goals should entail, letcAAAs take a look at the three main ways organizations use descriptive research today:All closed-ended questions aim to better define a characteristic for your respondents. This could mean creating a new line of products attempting to cater to this demographic.If your research goals fit under one of these three categories, you should be on the right track. Even in deciding which detergent to buy, we based our purchase on its claims. For example, a retail store that discovers that the majority of its browse sale items online before visiting the store would give it insight on where it should focus its advertising team.With the statistical capabilities of descriptive research, organizations are able to measure trends over time. Finally, for a well-structured quantitative research paper, all components must in order and presentable.FAQsQuantitative research has four types, and it includes descriptive, correlational, quasi-experimental, and experimental.Quantitative research design aims to discover the number of people who think, act, or feel similar to a certain kind of way.All quantitative data are derived from a large number of respondents. For example, the company can statistically identify the difference in opinion between genders and age. What does an average score of 8.3 mean? This is why it is essential to create research objectives before you jump into yourA Asurvey design.A Research objectives identify exactly what you are trying to discover in order to make educated decisions on the issues facing your organization. Some quantitative methodologies include a face-to-face interview, computer-assisted personal interview (CAPI), biometrics/neuro-marketing, mail, automated measures/people meters, and other quantitative techniques.How to Make Quantitative ResearchUnlike qualitative research that assumes negotiated reality, quantitative research is more on numerical and statistical interferences. An uninteresting research topic could take your drive away and demotivate your team without even finishing the project.3. Identify the VariablesThe research variables are the elements that have direct cause and effect on your study. Quantitative Descriptive ResearchDetailsFile FormatSize: 2 MBDownload4. We already know that going into the survey design phase with research goals is critical, but how do we know that our research plan will provide fruitful information? Now all you have left to do is decide how the data it will help your organization to act on a certain issue or opportunity. In case one of these days asks you: "What does a plane fly? A E .you can quickly make a conclusion with wings. But it wouldn't work for most of us. This makes this kind of research formulated technically. If you don't, the components of your research document will be everywhere, and this is the last thing you want to happen. The simplest questions could also be difficult to answer, especially if they want to be made to demonstrate the underlying reasons. As a result, this type of research takes the form of closed questions, which limits its ability to provide unique insights. For example, a shampoo company creates a survey that makes the public several questions that measure their attitudes on products, advertising and image of society. Perhaps they find that there is a statistically low opinion of the image of their company from young adult males. In addition, data collection for quantitative research includes surveys, interviews, studies, interceptions and systematic observations. Marketing: the most widely used quantitative methods of the industry are common academic requirements. If providing the search question seems complicated, go back after developing the topic is feasible. With this, researchers use two types of research methods to provide qualitative and quantitative results. With this, researchers should allocate more time to collect data and process results and, later, continue with research means organizing results in an orderly manner. How does it work? In the same survey they can ask various demographic questions such as age, gender, income, etc. After that, the company will be able to analyze data to compare different groups of people and their attitude. According to a reportthe first three of the sectorTraditional quantitative methodologies are online surveys, mobile surveys and computer-assisted telephone interviews (CATI) with numbers 79%, 53% and 30% respectively. Example of qualitative and quantitative researchSize sampling details: 58 KBSfill6. Search search formatDetails File size Size: 64 KBDownload7. The resulting value is mostly arbitrary alone. That said, it is important to check the margin of error and trust levels having a size of the correct survey sample. Do you need an audience to conduct your descriptive research? More than that, select the variables that work best for your search topic. However, if hotel management makes changes in order to better meet their customer needs, they can then again conduct the same survey and see if the new average score has increased or dropped. The easiest way around this is to narrow your topic so that you can focus on detailed approaches. But another common use of descriptive research would be the survey of demographic traits in a given group (age, income, civil status, sex, etc.). In other words, it is the subject you want to study and what concerns you most. Learn how SurveyMonkey Audience can help you build the right set of contacts for the survey. The different ways organizations use descriptive research is almost limitless. Although it will take an extra understanding to establish a search topic without questions, you can still provide by reading textbooks, periodicals, sample reports, existing research and other online references. Statistics will be the platform to quantify models, features, trends, opinions and other variables. This could include understanding traits or behaviors, such asTo your respondents to identify their group of EtA or to provide how many hours they spend on the internet every week. To do this, you have to consider some things. They could divide their own Objectives have based different aspects of their site, such as navigation, the quality of information and aesthetics. It could also be used to ask interviewees of opinions or attitudes, such as what they were satisfied with a product or their level of agreement with a political platform. In essence, all this information can be used by an organization to make better decisions. Since these variables are the meat of quantitative research and without it, the document you need to do becomes unconvincing. Very often, organizations will use it as a method to reveal and measure the strength of a group, attitude or behavior of a target group as regards a certain topic. It is what you do with the information collected that make your research project useful! Creating research questions means that you have to rely on the problems you want to solve. solve.

2022-5-23 · This research design proposal sample was submitted by a PhD candidate for her research into the correlation between runners and those who eat a vegetarian diet. She also wanted to demonstrate that those who choose one healthy lifestyle choice often choose to adopt others. Size: 30 KB; Downloads: 7051; Filename: Research-Design-Proposal.docx 2022-6-2 · A typical research proposal has to comprise the following items: Purpose of a research proposal - This is a summary of the need which your research endeavors to solve.; Title page - It is the first page of the proposal that displays the name of the author, the title of the research, its publisher, edition (if any), and the subtitle.; Introduction - The introduction summarizes the ... 2021-7-21 · And if you're trying to sway stakeholders, a report with a simple, elegant design and creative data visualizations is guaranteed to impress.
