groups of any size (very large groups need to be split into smaller teams with appointed team leaders). Also a quick fun method for deciding order (who goes first - for introductions, speaking, presenting, etc) and also for splitting a group into smaller teams, three or pairs. The idea can also extend into various activities for self- and mutual awareness, story-telling, understanding of life 'partitions', time management and prioritising, life balance, responsibility, and even delegation and management. Keys are of course very personal items with significant personal connections and representations, and so provide opportunities to create lots of interesting, enjoyable and helpful activities around them. Exercises examples: 1. For deciding order- 'Who goes first' - Ask each person to put their bunch of keys on the table in front of them. Order is decided according to most keys on the bunch. Tie-breaker(s) can be decided according to the key(s) with the most notches. 2. For splitting the group into teams or threes or pairs - Ask the group to sort themselves into the required number (which you would normally stipulate unless your purpose allows/prefers them to sort into teams of their own choosing) of teams or threes or pairings according to shared features (in common with others) of their key bunches, for example, number of keys on the bunch; type of key-ring fobs (sensible, daft, tatty, glitzy, unmanageably large, uselessly small, broken, holiday mementoes, promotional giveaways, etc), size of keys, type of keys, colours of keys, purpose of keys. 3. For starting and framing personal introductions and profiles - Ask group members to put their keys on the table. Each person then takes turns (you can use the order-deciding method above) to introduce and describe themselves according to their keys, from the perspective of each key's purpose and the meaning in their life represented by what each key unlocks. 4. For addressing time management, life balance and personal change, etc - Split the group into threes and ask each person to discuss in turn, among their teams of three, what their own keys represent in terms of stuff they're happy with and stuff they'd like to change (where they live, what they drive, what they value, their responsibilities, their obligations, personal baggage and habits, etc). 5. For addressing personal responsibilities and delegation, from others and to others, and responsibilities people aspire to - Ask the group to split into pairs or threes, and as individuals, to discuss with their partners what they'd like their bunch of keys to be like instead of how it is at the moment - what responsibilities (keys) would they like to lose or change or give to others - what new keys would they like to add? How else would they like to change their bunch of keys? If anyone is entirely happy with their bunch of keys ask them to think ahead five years. If they're still happy with their keys ask them to help facilitate. . You will no doubt think of your own ideas and variations to these exercises. Let me know anything different and interesting that works for your team. See also the 'letting go' de-cluttering exercise on the team building games page 1, which might give you more ideas for extending and varying these activities. See also the Johari Window model, which helps explain to people the benefits of feedback and developing self- and mutual awareness. 'Where in the world' exercise (personal development, icebreaker, warm-up exercise, questions for recruitment group selection or interviews, student presentations) This exercise and the activities that can be developed around this idea provide very simple quick ice-breakers or presentation ideas for all sorts of situations. The activity is for any group size. (For large groups: split the group into teams of 5-7 people and appoint team facilitators to ensure full participation by all. Presentations can be given within teams, not to the whole group. Teams can then reconvene as a whole group to review the exercise and experience after completing the activities in teams.) Ask the group as individuals to take a couple of minutes to close their eyes and imagine running their own ideal business or enterprise (not necessarily profit-making in a conventional business sense - it can be a service of any sort; some people for example seek to be carers, or writers, or gardeners, or cooks, to have a shop or a cafe, or to teach others. It is important to emphasise that everyone - not just entrepreneurs - can follow their dreams. Visualising and stating one's dreams helps greatly to make them happen). Then ask the group as individuals to close their eyes and think about where in the world would they locate their business/service activity and why? Give the team members or delegates anything between two and five minutes to think of their answers and to structure a brief explanation or presentation (again stipulate timing for their presentation or answer), depending on the purpose and depth of the activity. N.B. Giving a presentation is not an essential part of this activity. It might be more appropriate for the participants and/or the situation for people to simply keep their thoughts to themselves, or to write them down privately, perhaps to refer to and consider in the future. In explaining their choice of location team members will be encouraged to think about and express personal dreams and passions relating to their ideal business or service activity or enterprise (which involves exploring their fulfillment of personal potential and strengths), and also where in the world and why they would locate their enterprise or service activity, (which involves each person in considering the environment and context to which they see their dreams relating). Some people will not imagine locations very far away; others will imagine locations on the other side of the world. There are no right or wrong answers - the activity is an opportunity for people to think and imagine possibilities for themselves beyond the constraints that often limit us and our fulfilment . The exercise relates also to Johari Window development, to goals, personal and self-development, and (if ideas are expressed or presented) also provides helpful insight for team leaders, facilitators, trainers, or recruitment selection observers in understanding more about the people performing the exercise. 'One-word' exercise (exploring deep values and purpose, and behaviour towards others, which relates to all sorts of development needs and opportunities) Again - this is a simple activity - which contributes to many various positive outcomes. The exercise is for any group size, although if the presentation is required split large groups into smaller teams which can self-facilitate to enable full participation and discussion. If splitting into teams you can reconvene as a whole group for a review of the experiences after the team activities. Ask people as individuals to clear their minds, close their eyes, and think of one word - just one word - that they feel best describes or encapsulates living a good life. A one-word maxim for life. The facilitator might be required to explain what is meant by 'living a good life'. Use your imagination so as to relate the concept to the situation and the participants. Think about: a force for good; civilised society; leaving the world a better place than when you entered it. Of course, words mean different things to different people, and many people will find it quite difficult to pick just one word, but this is the point: One word concentrates the mind in a way that five or six words or a longer sentence tend not to. For participants who find it impossible to decide on one word, encourage them to use as few words as possible - while still aiming to focus on the essence, or a central concept, rather than a catch-all or list. It's easy for people to think of a list - one word is a lot more thought-provoking. Ask people to write down their chosen one word (or words if necessary), plus some brief explanation as to what they mean. Then in turn ask people to tell or present their answers to the group or team. It is interesting to hear people's ideas. They will be quite different to how people actually normally behave in organisations - to each other, to customers, to suppliers, etc. And quite different to how people behave in societies in local, national, religious and global communities. Why is this? Where does individual responsibility begin and end? Are we part of the problem - or part of the solution? Do we want to be part of the solution? What actually stops each of us from trying to live and behave more often as we know to be right? Are the pressures and habits and expectations that distract us from more often following the right path really immovable and so strong that we cannot rise above them? What personal resolutions and changes might we want to make? The exercise relates also to Johari Window development, personal life philosophy and values, personal and self-development, and (if ideas are expressed or presented) also provides helpful insight for team leaders, facilitators, trainers, or recruitment selection observers in understanding more about the people performing the exercise. Transactional Analysis and the blame model within the TA section can be a helpful reference to assist people in understanding more about the forces that cause us to behave differently from what we know to be right. See also the articles section about Love and spirituality in organisations which helps explain about bringing compassion and humanity to teams and work. Spelling is the combination of letters that form the written word. Reading and spelling go hand in hand, and very young kids start with the most basic understanding of spelling when they first learn how to put letters together. Later, as they become more proficient readers, they use spelling to begin the process of writing. That time should be split between reviewing content and doing practice tests. No matter how much time you spend on SAT prep, remember that quality time is more important than anything else. Treat every practice question like it's a test question, and have a plan that guides how you will spend your time. 29/11/2017 - AS AN EAST WIND blasts through a gap in the Cordillera de Tilaran, a rugged mountain range that splits northern Costa Rica in half, a female mantled howler monkey moves through the swaying trees of the forest canopy. A Ken Glander, a primatologist from Duke University, gazes into the canopy, tracking the female's movements.
