Lecture Notes on Cardiology, fourth edition, is a comprehensive introduction to one of the most rapidly changing specialties in clinical medicine. The completely new author team has produced an informative and highly accessible book, presenting clinical cardiology in a way that relates disease to underlying pathophysiological mechanisms, and linking this directly to the patient, their disease and its management. This new edition has been produced in response to the exciting new developments in all areas of cardiology. It has been completely revised and rewritten, with an emphasis on recent major clinical trials relating to cardiology and the huge advances made in cardiac imaging techniques. These concepts are fully illustrated and a colour plate section has been added to show emergent techniques, including Doppler imaging and MRI. The succinct and topical content of this book means that it will not only appeal to the undergraduate medical student, but also to the junior doctor studying for higher examinations. The ever-useful wikiHow has posted a how to detailing the finer points of taking good lecture notes, splitting the process into what you need to do before, during, and after the lecture to be prepared and capture the "perfect" notes. These suggestions could probably apply for taking meeting notes as well, though your boss may or may not be as prepared at the lectern as your professors were (at least mine never have been). Either way, this has some good tips for what you need to pay attention to in order to get the most important points out of a lecture. For advice on note-taking systems (which this how to does not cover), check out Gina's recent feature on taking great notes. How to Take Perfect Lecture Notes [wikiHow] Pulesnotes uses cookies.
