Ibm cognos bi reporting

The screenshot shows the 'Welcome to IBM Cognos Software' page. The top navigation bar includes standard browser controls (back, forward, search, etc.) and tabs for 'http://localhost:8080' and 'Welcome to IBM Cognos S...'. The main title 'IBM Cognos Software' is displayed prominently. Below the title are two sections: 'My Content' and 'My Actions'. 'My Content' lists 'My home', 'My workspaces', 'IBM Cognos content', and 'My inbox'. 'My Actions' lists 'Create a workspace on the web', 'Author business reports', 'Create a workspace on my computer', 'Query my data', 'Analyze my business', 'Author advanced reports', and 'Manage my events'. At the bottom left, there's an 'Administration' section with a link to 'Administer IBM Cognos content'. A checkbox at the bottom left says 'Show this page in the future.'

Toutes les activités sont itératives à l'exception des activités 3 et 6. On définit l'architecture et les outils seulement à la première itération.

Business users can modify queries and personalize their reports without relying on IT, receive and interact with reports on their mobile devices with Cognos Mobile and when offline with Cognos Active Report. The created documents can then be imported using Cognos Connection, published, and made available for other users. In contrast to the professional authoring mode, the express authoring mode allows the use of dynamic data.[1] Analysis Studio Drill-up and drill-down as example OLAP-functionalities Users can create analyses of large data sources and search for background information about an event or action. Search terms are not case sensitive, word, and spelling variants are included in the results. You can also create shortcuts, URLs, and pages. In professional authoring mode all types of Data (relational or multidimensional) can be used, but dynamic data can not be displayed.[1] The express authoring mode has a more simple user interface, designed for non-technical users. When searching, an index of the prompts, titles, headings, column names, row names, data elements, and other important fields is used as a base. The full-text search in IBM Cognos Go! Search is related to the search in regular search engines such as Google. It provides a toolset for reporting, analytics, scorecarding, and monitoring of events and metrics. Users can search operators such as +, - or use "" (quotation marks) to change the default behavior of search queries with multiple words. Using this portal, content can be searched in the form of reports, scorecards, and agents, it can be managed, structured, and displayed. It offers two different modes: The professional authoring mode enables users to access the full range of Report Studio functionality.
