I was wondering how much data scientists make You. We are here to help you discover Data Science salaries and how they are influenced by various factors. Recent years have seen an increase in interest in the field data science. According to the194; 160; Bureau of Labor Statistics, there are almost sixty thousand scientific data locations across the United States, and despite the global pandemic, data takeovers have increased to 194; 160; 46 percent194; 160; in 2020 only. The La In every sector, in order to manage the abundance of information available in the modern era, these trends risk continuing. It's natural to wonder how much data scientists do with a role in data science. However, this topic of vital importance of what a person earns as a data scientist is also an incredibly delicate topic that can be difficult to find good information about. Of course, it is easy to quickly find average and average wages off resources like Glassdoor, in fact, it is Payscale, but that is highly crowdsourced information, and of course there is a certain level of skepticism interest for the data. Not to mention a discrepancy between the salaries of the data scientists of each site, as well as © of conflicting factors surrounding remuneration which may further obscure actual information, such as career progression, company size, sector and location, as well as other elements of total remuneration other than the basic salary of the scientific date. We're here to help you! Let us take a look at the salaries in date science and how they are influenced by different factors. How much can you do as a data scientist? We are looking for what you can earn with a role of data science and what are the factors that affect your total salary. Elements of Data Scientist Compensation First, remember that the basic salary is not the only element of how you are rewarded for your work. The "total compensation" of a job offer includes all types of benefits that employers use to maintain their current employees and to attract new benefits, which can often be attributed to themselves a numerical value. These benefits may include insurance cover, pension plans, contingency plans, and more. Health coverage is a standard benefit, variant with available insurance plans employment-provided and the percentage level of employer contribution, up to full coverage. Other insurance cover other than health care which may be covered by: employer can also include dental, disability and life insurance.Pension PlanAccess to a pension plan, such as a 401k, is another standard benefit for employees to save a portion of their salary to invest towards retirement, and can sometimes come with the additional benefit of a match from the employer.Stock PlanMany private companies also provide a backup plan for their employers, tying additional employees compensation to the value of the company. Although the exact structure of such availability may differ from company to company, it is always possible to appreciate the value of the company, and thus the value of the stock. The possibility of acquiring or listing the company can create additional value for the employee.BonusesBonuses are another additional element of total compensation and can be linked to individual and company performance.Additional miscellaneous benefitsYou can also expect various benefits. Large companies, such as FAANG, are known to provide a wide range of free food and snacks for their employees. Companies can also offer discounts on their products to their staff, or even provide them for free to their employees. Additional benefits are also common for technology, public services, physical and mental health and much more.Remember that the elements of total compensation compensate each other, which means that large benefits can mean a reduction in a given scientist's basic salary and thus in the amount of money he brings home. For example, the start-up fee will often be lower than large companies, but you will have larger stock options that can potentially offset that fee. When considering how you are compensated for your role, it is worthwhile to calculate the comparative value of the benefits you receive in relation to the offered by data scientist. you might be willing to make a reduction in the basic salary if this is compensated by the added value of the benefits. benefits.from your total compensation are all types of intangible within your working environment which are also considerations of value, such as your personal interest in the sector or company, your correspondence with corporate culture, and the potential for growth in the company or your career. Although these cannot be immediately obvious when considering job offers or starting-date posts, they are important factors to bear in mind once you start working. For convenience, our numbers will only compare the basic salaries of the roles of data science, but as you read, keep in mind that distinction between base and total compensation. Data Scientist Salary of Career Progression226; Of course, you will gain more progress in your career as you become more and more able to increase in time using your experience. Entry level roles can constantly promote in more advanced roles, such as from Analytical Data I to Analytical Data II. Over time, this experience can be levelled in high-level positions or even in management roles, such as Senior Data Scientist or Data Scientist. With seniority, your salary will rise accordingly. The nature of certain roles also makes a difference in their compensation. For example, the roles of Data Scientist generally require a few years of experience above the equivalent levels of the roles of Data Analyst and provide a slightly higher average salary. As such, the years of experience required can translate into someone who works as a data analyst for a few years before becoming a Data Scientist. This also means that data analysis responsibilities can often be incorporated into the 1994; 160for the roles of data scientists. However, it is important to remember that different companies can have standards different for what an exact title or role can mean. A data expert in a company may have very different responsibilities and compensations than a data expert in another company, or perhaps perhapsthe same as a data analyst II in another organisation. There may also be "internal levels" specific to each function. While a company may have only one data analyst and a senior data analyst, a larger company may have further intermediate phases of Data Analyst II and Data Analyst III or even more. In any case, make sure you are aware of the extent of the responsibilities of your role, especially in comparison to broader standards than a role entails. For example, make sure you are not a Data Scientist still doing the pure data entry work. Understanding what responsibilities you have, as well as the growth potential for your role within your company, and wider for your long-term career. Let us compare the salaries of data scientists of different titles below. Note the variation from multiple roles at the entry level as Junior Data Analyst to senior management positions such as the Data Director. These figures are compared to the statistics of the Labour Statistics Office, which capture the entire spectrum of the role levels of Data Science, and list the national average wage for Data Scientists and Mathematical Science Occupations^160; as $98230, and average salary as $103930. Now that we covered the scientist's salary given for specific role, let's take a lookhow it is influenced by the company in which you work. It is pointless to say that smaller companies are likely to have a reduced total compensation compared to the super large international conglomerates that are FAANG. Of course, small and medium-sized enterprises will still make an effort to keep their offers competitive. For example, as mentioned earlier, startups often offer their employees more back-up options to compensate for the reduction in the basic salary. We discuss some specific salaries of the data analyst for some well known companies below. We dive deeper into the comparison between the individual FAANG companies in our119; 160? As you look at the wages of business data science, you can notice that, apart from the size of the company, similar companies have similar compensation. This follows broader models of how the roles of data science are paid by industry. Date Scientist Salary by industry226; The abundance of data available means that there is an increasing availability of data science roles in every industry. While technology companies like FAANG may be the first names that come to mind, and will in all likelihood be the most lucrative positions, there are also a number of other spaces to work in, depending on the opportunities and availability, and your personal background, experience and interests. Of course, pay varies depending on the sector in which you work. 160; The following salaries of data scientists in different industries and industries. Technological companies are part of the information industry, including telecommunications, computer and hosting, and software publishers, and are higher in terms of compensation. The sector of and insurance includes banks, intermediaries and investment firms. Government jobs at federal, state and local level are below the level of compensation, even though a little balanced by benefits such as pensions, a better work/life balance, and job security that cannot be achieved in the private sector. Salary data search for Location/City It is well known that jobs in urban technology hubs pay some of the highest wages. As such, even within the same company, where it is physically located it plays an important role as it has been compensated. Of course, this can change in the coming months or years after the pandemic as companies consider pros and cons against permanent work, even if it is also common practice to index an employee's pay according to their physical work position. Below, we explore the average salary Data Science per city. Source: U.S. Bureau of Labor Statistics However, there is some variation as far as the scientist's salary of data will actually go because of the cost of living that position. Cities are often classified in low, medium and high cost of living places. The increase in rent and other costs in some cities, such as San Francisco and New York, has also extended the usual term "High Cost of Living" (HCOL) to VHCOL, or Very High Cost of Living. The consumer price index, or CPI, is a "measure of the extraordinary average change in prices paid by urban consumers for a basket of consumer goods and services" as defined by the Labour Statistical Office. Coverage of food and drink, accommodation, clothing, transport, medical care, recreation, education and communication, and other goods and services, the CPI can be used to approximate the cost of living in an area. Note that cities with the highest salaries Median Data Science generally also have a higher CPI. Source: U.S. Bureau of Labor Statistics Now, when we divide the PCC of each city from the average salary Data Science, we can get an approximation for Your salary could go anywhere. Source: U.S. Bureau of Labor Statistics Note the high cost of living areas, balanced against their high salaries, salaries, that areas such as San Francisco and New York go beyond the lower or middle areas such as Detroit or Atlanta. Although this does not mean that you cannot live in those HCOL areas, it means that it may be more difficult to perform a higher quality of life. Keep these factors in mind as you would like to move to work. Summary Data Science is a rapidly expanding industry with opportunities in every industry. However, many factors can influence how compensation is paid, including the company, the sector and the position. At the same time, they can have practical effects on your life, such as career progression, personal interests and quality of life. The national average of $98k does not mean that your entry level data science role will also pay for that. Remember to take all these factors into account when looking for a fair and competitive wage for a role in date science. Good luck! Also published on StrataScratchJoin Hacker Noon Noon Noon
