## News report about weather in philippines

An approaching powerful typhoon has left one person dead, another missing and prompted the evacuation of more than 100,000 people in the Philippines, although the unusual summer storm is not expected to blow into landMANILA, Philippines -- An approaching powerful typhoon has left at least one person dead, another missing and prompted the evacuation of more than 100,000 people as a precaution in the eastern and central Philippines, although the unusual summer storm is not expected to blow into land, officials said Monday.Typhoon Surigae was about 500 kilometers (310 miles) east of Infanta town in Quezon province on Monday afternoon with sustained winds of 195 kilometers (121 miles) per hour and gusts of up to 240 kph (149 mph). It is forecast to slowly move northwestward and then veer eastward away from the northern Philippines around Thursday.Vicente Malano, administrator of the government weather agency, said a high pressure area extending from China to Japan was blocking the typhoon from blowing inland.“We’re lucky it’s not going to make landfall because if it hits land, it’s really going to be super devastating,” said Ariel Rojas from the weather agency.The typhoon’s 900-kilometer (560-mile) band of rainclouds and strong winds nevertheless flooded at least 22 villages and caused power outages in four provinces. More than 3,200 people and 43 ferries and cargo ships were stranded in seaports after the coast guard suspended sea travel as the typhoon blew nearer, the government disaster-response agency and the coast guard said.A 79-year-old man died in St. Bernard town in Southern Leyte province after being hit by a falling coconut tree, the Office of Civil Defense said. Another villager in San Jose town in Northern Samar province was missing after he went to a nearby island in a motorboat to secure his farm animals, it said.More than 29,300 families or 109,000 people were evacuated to emergency shelters as a precaution in five eastern provinces in the Bicol region, it said. Mayors said they have to open more evacuation centers to ensure social distancing during the pandemic.“It’s really tough, it’s toxic, but we have no choice,” Mayor Ann Gemma Ongjoco of Guinobatan town in Albay province said by telephone. She said even churches were being used to shelter more than 6,100 villagers in her town, including many from communities threatened by mudflows from Mayon, one of the most active volcanoes in the archipelago.The Philippines is a coronavirus hotspot in Southeast Asia, with health officials reporting 945,745 infections and 16,048 deaths.About 20 typhoons and storms lash the Philippines each year. It also sits in the so-called Pacific “Ring of Fire,” a seismically sensitive region often hit by earthquakes and volcanic eruptions, making the impoverished nation one of the world’s most disaster-prone countries. TYPHOON ‘BISING’ RAPIDLY INTENSIFIES OVER THE PHILIPPINE SEA EAST OF NORTHEASTERN MINDANAO Hazards affecting land areas Heavy Rainfall: Between tomorrow (17 April) late evening and Sunday (18 April) late afternoon, Typhoon ‘BISING’ will bring moderate to heavy with at times intense rains over Eastern Visayas and Camotes Islands. Under these conditions, flooding (including flashfloods) and rain-induced landslides may occur especially in areas identified in hazard maps as highly or very highly susceptible to these hazards. Severe Winds: Tropical cyclone winds of at least strong breeze to near gale in strength extend outward up to 500 km from the center of the typhoon. Tropical Cyclone Wind Signal (TCWS) #1 may be hoisted over the rest of Eastern Visayas and portions of Bicol Region in anticipation of the onset of strong breeze to near gale conditions associated with the approaching typhoon. Based on the current forecast scenario, TCWS #2 remains the highest level of wind signal that will be put into effect due to this typhoon. However, in the event of a further westward shift in the track forecast, there is a possibility that some localities will be placed under higher levels of wind signal. Hazards affecting coastal waters In the next 24 hours, Typhoon ‘BISING’ will bring rough to very rough seas over the eastern seaboard of Bicol Region (2.5 to 4.0 m), Eastern Visayas (2.5 to 6.0 m), Caraga (2.5 to 5.5 m) and Davao Region (2.5 to 3.0 m). Sea travel for all types of seacrafts is risky over these waters. Track and Intensity Outlook Typhoon ‘BISING’ will move generally west-northwestward or northwestward over the Philippine Sea until Monday (19 April) evening before slowing down and move more northward until Tuesday (20 April) evening. Owing to favorable atmospheric and oceanic conditions, ‘BISING’ has rapidly intensified over the past 24 hours. It is forecast to further intensify and reach its peak intensity (175-195 km/h) by Sunday. We’ve detected that JavaScript is disabled in this browser.
