Airscreen for firestick

Watch webvideos, online movies, live tv streams and your personal photos, videos & music on your Amazon Fire TV. Enjoy the show on your big screen.With Video & TV Cast you can browse through the web and stream any video you want on your Amazon Fire TV (movies, tv shows, sports, music and more). Just navigate to your favorite website and send the embedded video with a single tap to your Amazon Fire TV. The discovered video will be shown below the browser. A tap on the video link will send it to your Amazon Fire TV immediately. Streaming personal media from your device is also supported.>>> Important Notes* The app only works with a Amazon Fire TV or Fire TV Stick.* iTunes movies, Flash video and DRM protected videos like Amazon Prime, Netflix, Hulu, Vudu, DirecTV, Xfinity, HBO now are not supported!* Please test your favorite videos with the free edition before upgrading!* The app streams only the video part of a website and not the whole website content (No screen or tab mirroring!). * Sometimes it is necessary to play the video on your iPad or iPhone first before it gets discovered by the app for streaming. It may also be necessary to start casting multiple times until it works with specific videos.* If a video is not working at all, please check the FAQ on the app startpage. If that does not help you, please drop us an email before leaving a negative comment on the App Store. We will try to add support for that website as soon as possible. >>> UPGRADE FEATURES (available as in-app purchases)* Premium Edition: Unlocks all of the features listed here. Also future features are included, so you do not have to pay for them when they are released in an updated app version. * Remote Playbar: A remote control that allows you to fast forward or rewind videos while browsing. It syncs across all your iPads & iPhones that are connected to the same Fire TV. So your video can be controlled by different users in the same room.* Personal Media: Cast unlimited personal photos, videos and music directly from your device or from cloud services like iCloud and Dropbox. * Ad-Blocker: Blocks ads & popups on most websites and removes the sponsoring ads from the app. You can update and enable/disable ad-blocking at any time in the settings. * Bookmarks: Save unlimited website bookmarks. Synchronize and transfer them between different TV Cast apps and iOS devices by using backup and restore via iCloud.* Desktop Mode: Change the browser user-agent and cloak your iPhone/iPad as a desktop PC to load the desktop website instead of a mobile website. Please note that this will NOT enable video casting on websites that serve Flash videos in desktop mode.* Change Homepage: Set your personal homepage in the settings.>>> A MESSAGE FROM THE DEVELOPERSCountless websites have been reported to us and we already support more than 90% of all videos on the internet. But still we know that things can get even better. Your feedback and priorities will drive our work ahead, and you'll see new features and more supported websites in our next app updates.Disclaimer: This app is not affiliated with Amazon or any other trademark mentioned here. I've downloaded and tried just about every casting app for the Fire Stick. The first question is always, "Does it work?" Most of them don't. So this app has that going for it. The next issue is, "Will it continue to work?" Both Fire Rocket and iWebTV have stopped working for me on my iPhone 7Plus, though I can still download movies through Fire Rocket. This app is a little more confusing to use, but it works. I'll wait to see if it stays working before I pay to upgrade it. I didn't download this app because I cut the cord or something. I downloaded it to view my movie projects on my fire stick without having to download it to my phone and lose precious phone storage. Except, this app forces you to pay for a lot of basic functions like scrubbing the video. I've found that this app will stop at a certain point during playback without fail, forcing you to watch the movie from the beginning which can be time consuming and extremely frustrating. If you want to be able to resume playback you'll have to pay for the scrubbing function but I suspect as soon as you pay for that, the video won't suddenly stop more than halfway through your video - making your purchase almost useless. I wouldn't suggest using this app if you're going to be watching movies because it will almost always suddenly stop working during the movie and force you to either buy the scrubbing function or start your movie over from the beginning. Unless you want to pay for those things. If you're just trying to use it for free like me, it's best to use it for videos 30mins or less. This is the second version of this app I have tried. The one for the chrome cast works flawlessly and I cannot recommend highly enough. I've only had the fire TV stick and this app for a little over a month and it's spotty at best. The first issue I had with it wasn't even performance related but rather that you had to pay extra for the video progress bar. That was free with the chrome version and without it all you have is play and pause control. Now to the performance issues. It doesn't connect about 50% of the time, even after restarting the app on my phone and the fire stick or restarting the fire stick all together. I've only had this issue once or twice in over 3 years of use with the Chromecast. I don't know if this is a hardware issue in that the Chromecast is a better product with better comparability for third party app integration or what. Very disappointed with the Fire stick version. The developer, Kraus und Karnath GbR 2Kit Consulting, indicated that the app's privacy practices may include handling of data as described below. For more information, see the developer's privacy policy. The following data may be used to track you across apps and websites owned by other companies: Location Identifiers Usage Data The following data may be collected but it is not linked to your identity: Location User Content Identifiers Usage Data Diagnostics Privacy practices may vary, for example, based on the features you use or your age. Learn More Developer Website App Support Privacy Policy So, you got yourself a brand new Amazon Fire TV Stick but confused about how to use it to mirror your phone's screen? Well, do not worry, we've got your back. Here's a quick guide on how you can mirror your Android or iPhone screen to Firestick. Also, read | Mirror your Android or iPhone's Screen to Chromecast Mirror Your Phone's Screen to Firestick/ Fire TV One can mirror his/ her phone's screen easily to Amazon Firestick. However, methods are different based on the device you have. Below, we've mentioned a detailed step-by-step guide for both Android and iPhone. On Android Phones You can easily mirror your Android phone's screen to your Firestick using the steps below. But before we start, make sure that both the devices are connected to the same Wi-Fi network. 1] Enable Screen Mirroring on FireStick: Hold down the Home button on your Firestick remote. Then, select Mirroring to enable it. Alternatively, you can also enable mirroring in Settings > Display & Sounds > Display Mirroring. 2] Enable Screen Mirroring on your Android: Now, unlock your phone, head to Settings > Connections, and enable 'Screen Mirroring.' You can also find the option in the quick settings tile with different names like Wireless Display, Screen Cast, Smart View, or Miracast (will vary based on your phone's make and model). 3] Connect the Firestick Device: Once enabled, your Firestick/ Fire TV's name should appear in the list of available devices. Select the device and wait for the screen mirroring to begin. Again, make sure that the Fire TV and your phone are connected to the same wireless network. RELATED TIP How to Disable Auto Media Downloads on Telegram DesktopNo Built-in Screen Mirroring? Use Third-Party Apps Due to restrictions imposed by Google, most stock Android devices do not allow you to mirror your phone to TV except for Chromecast. In that case, you can use third-party apps to mirror your phone's display using the steps below. That said, it may not be as smooth as the built-in screen mirroring. Download and install the Cast to TV app on your phone. Connect the phone and Fire TV to the same WiFi network. Now, open the app and wait for it to automatically detect your Fire TV device. Once detected, tap the device name to start screen mirroring. On iPhone (iOS) AirScreen is a third-party app that lets you mirror content from your iPhone's screen to a Firestick device using the iOS AirPlay technology. Like the method above, you need to connect both devices to the same network. On your Firestick device, hover over the search icon and type 'Airscreen.' Select the Airscreen app and click Download. Once installed, open the app and click Start Now. On your iPhone, open the Control Center and click on Screen Mirroring. Tap your Firestick device's name to start screen mirroring. That's it, your iPhone's screen will now be successfully mirrored to the Fire TV device. If you're not sure about the name, you can view or change it in the Airscreen app's setting. Wrapping Up This was all about how you can mirror your Android or iPhone's screen to the Firestick device and enjoy photos, videos, and much more on a larger screen. Anyway, did you face any issues with the methods above? Let me know in the comments below.
