Edit pdf pages on ipad

There's no doubt that Microsoft Word is the go-to for businesses worldwide. As such, you might receive Word documents to open on your iPhone, whether or not you actually have Word for iOS installed. If you prefer editing text documents with Pages, Apple's own word processor, you can import and export Word docs easily.When you first open Pages, you can choose to start a new document or open an existing one via the built-in Files manager. If you have a Word doc already saved somewhere on your iPhone, in iCloud Drive, or via third-party cloud storage, you can open it without a problem by just tapping it.Article over, right? Of course not. It's easy to open a .doc or .docx file from the Files manager, but what about in Mail or Messages? Tapping won't open it in Pages.Don't Miss: How to Ask Siri to Open Specific Apple Pages Documents That essential functionality might not be evident at first. Depending on whether you're running iOS 12 or iOS 13, your iPhone might make opening Word documents in Pages easy, or it might hide the feature from plain sight. For example, in iOS 12, you can tap on a Word doc right from the Files app itself to open it in Pages, but in iOS 13, it doesn't work like that. We'll show you how to open the files in these situations, no matter which version of iOS you may be running at this time. No matter how you open a Word document or from where, Pages creates a .pages copy to work from in the app and saves it to your default location in the Files app, likely the "Pages" folder on iCloud Drive. So, the original Word file will remain unchanged — it will never be overwritten. In order to share the Pages doc as a Word doc to someone else, you'll need to export it as a .docx file to another location or app. Let's say you were just emailed a .doc or .docx to review. Simple, right? Not so much. When you tap on the download, it opens a Quick Look preview of it.In iOS 12 and below, you can also peek-and-pop to the preview using 3D Touch. In iOS 13, you can long-press and hit "Quick Look" to open the preview as well. (Not all apps support those shortcuts. For instance, Messages in iOS 13 only supports tapping to preview while supports long-pressing too.)To open it in Pages, tap the Share button in the top right to open the Share sheet. Previewing in iOS 12 (left) vs. iOS 13 (right). Alternatively, you can open the Share sheet without using Quick Look first. To do so, long-press on the downloaded file. On a device using 3D Touch in iOS 12 or below, lightly tap-and-hold instead. The Share sheet will open right up for iOS 12 and under, but on iOS 13, you'll need to hit "Share." (Not all apps support this, such as Messages. Mail obviously does.) Sharing right from the file on iOS 12 (left) vs. iOS 13 (right). Now, look for the "Copy to Pages" or "Open in Pages" share extension in the row of app icons. In iOS 13, if you don't see it listed, scroll to the right on the list of apps, tap "More," then hit Pages' share extension. If you perform that action frequently in iOS 13, you might see the option appear in the row on its own. Either way, the document will copy itself as a new .pages document in the Pages app and open it right up.Not everything will transition over smoothly to Pages, so some elements may be removed or changed to equivalents, such as fonts and backgrounds. If that's the case, it will let you know before it loads. Either way, hit "Done" to proceed. Opening up the Word doc in iOS 12 (left) vs. iOS 13 (right). Once the document is loaded, you can interact with it just as you would any Pages document. You might notice some formatting errors, however, if the Word document featured fonts and other features not found in Pages. If you need to send the edited file back to somebody and aren't sure if they use Pages, you can export it to a .docx Word file. To do so, tap the ellipsis (***) icon in the top right, select "Export," then "Word," and use the Share sheet to share it however you need to. This article was produced during Gadget Hacks' special coverage on using your smartphone to boost productivity. Get a lifetime subscription to VPN Unlimited for all your devices with a one-time purchase from the new Gadget Hacks Shop, and watch Hulu or Netflix without regional restrictions, increase security when browsing on public networks, and more.Buy Now (80% off) >Other worthwhile deals to check out: Do you want to open and/or edit .pages files on your Microsoft Windows computer? Apple's Pages is a powerful word processor that lets you create beautiful documents. Basically, you can use Pages at iCloud.com. iCloud.com is Apple's official web site where some of the iCloud features are available from a web browser. This article explains how you can create, open and edit a Pages document without the Pages app. You may need to open Pages documents for various reasons. For example, you may receive one via email, and you may not know how to open and view if you are not an Apple user. Obviously, you can create and edit Pages document on your iPhone, iPad or Mac. You can also create, view, edit and share these documents using the icloud.com service on your PC. By default, Pages documents are saved as a Pages format file (like macreports.pages). In this article, we will teach you how to view/edit a .pages files on your Windows PC, or on any other computer with the Internet connection. Do not worry, you won't have to buy, download or install any app. All you need is your web browser. iCloud Pages is Apple's an online word processor. It lets you create and format the most document formats. Please note that if you are a Mac user, you can download Pages from the Mac App Store. How to open Pages files on PC: The easiest way to view and edit Pages files without an Apple device is to use iCloud. In 2015, Pages was made available on a web interface accessed via the iCloud website. This means that Microsoft Windows users can edit and create documents on the web via the iCloud website. Pages for iCloud lets you create and edit documents using a web browser (Safari, Explorer, Chrome, etc) from a Windows computer. All you need to do is to upload your document to Pages for iCloud, which can be done from any device. 1-On your computer, open a web browser then visit icloud.com. 2-Sign into iCloud. You need an Apple ID to sign in, if you do not have one, you can create an Apple ID. Signing up for a free Apple ID account will give you 1GB of free iCloud storage. If you do not have an Apple device, your account will be web-access only. This means that you only see and use Contacts, iCloud Drive, Notes, Pages, Numbers, and Keynote. 3-Click the Pages icon. 4-Upload your .Pages file that you want to view and edit. There are two ways to upload documents so that you can edit: You can upload your document by dragging it from your desktop. You can also upload a Pages document by clicking the cloud icon, as you can see below. 5-Now you have two options: Option A: View and edit the document using your web browser. When you've done, you can share this document. If needed, you can also print this document. Option B: You may try to export your .pages document as a .doc or docx and edit it on your computer. To do this, click the Tools icon, then "Download a Copy..." and choose one of the file formats (doc, pdf, pub, and pages). This will save the doc on your computer, so you can open it with Microsoft Word to edit. That's it. This is pretty easy and it works. Being able to introduce content from your PDF documents to this dynamic program opens-up a world of creative possibilities. There is growing demand to use content from PDF files in programs like Pages to create new documents, but this has never been easy. PDFs are definitely the most useful file format for businesses, but, because of their uniform and cross-platform nature they also have limitations when it comes to creativity, editing and manipulation. Working creatively with PDFs has always been time-consuming and resource heavy and almost impossible for staff working remotely. PDFelement for iOS has solved this issue allowing quick and easy conversion from PDF to Pages files on your iPhone or iPad without an internet connection. PDFelement removes the stress from PDF file conversion. How to Convert PDF to Pages with PDFelement Turning PDF documents into dynamic files for use in Pages has never been so easy. Here is how you can do this with PDFelement: 1. Download the PDFelement app and start converting your files To convert your files you will need to use the PDFelement app. Download this from the App Store on your device. You will be able to access the app via the icon on the start screen on your device. Once the app is opened you will be able to open and convert your PDF files. 2. Open PDF file to convert to Pages The PDFs available to convert will be available from the "Local" folder within the app. If that folder is empty you can add files via WiFi or your camera on your device by selected the "+" on the screen. In your list, to the right of the file name click the three vertical dots to open up the actions menu. 3. Convert the PDF to Pages In the actions menu, click "Convert". This will open-up a new menu with file options for all the file types you can convert your document into. Click "Pages" to begin the conversion. 4. Check conversion in the Convert folder Select the folder named "Convert" back in the "Local" folder and then click the file to open and check the conversion into Pages. Using the simple steps above for the PDFelement app, for iPhone and iPad, you can convert PDF to Pages simply and effectively in just a few minutes. This conversion process will produce a quality, exact copy of your PDF to edit and manipulate in a range of programs using the Pages file format. PDFelement also offers this function for eight more file types. Free Download or Buy PDFelement right now! Free Download or Buy PDFelement right now! Buy PDFelement right now!
