Canon mx922 review

Canon PIXMA GM4050 offers Canon has extended its inkjet line without cartridges with two MegaTank mono models. Canon PIXMA GM4050 is a multifunction printer of A4 size equipped with scanner, ADF, Wi-Fi and all other features that may be required in a small office, except for color. And you can have it even if you buy the optional tricolor cartridge. Basically, however, this is a basic, black and white multifunction device whose main feature is the remarkable page rendering. A bottle of black ink gives you 6,000 pages printed and there are three bottles in the box. Cost of approximately £300 (US\$411, AU\$538) which makes this inkjet cheaper to buy and perform than most lasers. It seems at first glance like this relatively affordable all-in-one device really has everything, but there are some missing features. We should probably warn you from the beginning that it's not compatible with Mac. These are the best all in a printer around today(Source Source: Jim Hill)Design and construction The Canon PIXMA GM4050 attempts to hide its mass with curved corners and a fairly low profile (it is 23 cm tall), but it is still a remarkable black plastic clump. He will certainly not win a Red Dot design award as his key competitor, Epson EcoTank ET-M2140. (Image credit: Jim Hill)With the most traditional form factor, Canon placed the ADF (automatic document feeder) at the top of a flatbed scanner of size A4, which is on the top of the printer. If you are interested only in the printerthen the Canon PIXMA GM4020 is the model for you. (Image credit: Jim Hill) The entire control panel bends outward, making it easier to see when you are standing over the printer. However, the display is a very small two-line deal, which is difficult to read from any distance. (Image credit: Jim Hill) There are connections for an Ethernet cable and a USB data cable on the back, but there is no front USB port, or memory card slot. The first thing you notice on the drawing is probably the transparent plastic tank in the left front corner which makes it easy to see how much black ink you left. (Photo source: Jim Hill) If this was a color model, like the Canon PIXMA G6050, there would be three more tanks on the right side, but being mono, there is only one empty space in this case. This space is large enough to store a spare cartridge. That's right, Canon's rechargeable MegaTank printers are not completely free of cartridges. They use a small small black cartridge that is surmounted by the padded ink. You can also install a tricolor cartridge next to it when you want to update to the color printing. Here are the best options for home printer around (image credit: Jim Hill)Features and specifications The Canon PIXMA GM4050 is a three-in-one multifunction device, which means you can print, scan and copy. There's no fax, but we're guessing it won't be a problem for the majority. It also offers a 35-sheet ADF for scanning or copyingdocuments. Wi-Fi is built in, there is a duplex car mode, a two-line display and the ability to print on paper sizes up to A4, including envelopes. Spectacle Sheet type: Mono 3-in-1 A4 Inkjet printer Functions: Print, scan, copyInk: Rechargeable black ink Connectivity: Ethernet, Wi-Fi, Wi-Fi Direct, USB Data storage tools: no print speed: 13 ipm (mono) Load capacity: 350 sheets (lunch + rear trays) Printing quality: 600 x 1,200 dpiScan quality: 1,200 x 2,400 dpi Apple AirPrint: no Google Cloud Print: noConsumables included: 3x black ink bottles (18,000 pages) Dimensions/Weight: 403 x 369 x 234 mm (WxDxH)/9.2kg This is not a premium model, so there are some missing features. There is no touchscreen for example, no front USB port for foot printing, no NFC or Bluetooth connectivity and unfortunately, no double side scanning. And unlike other inkjets, it can not print on photo paper. As mentioned, this model is intended primarily as a mono printer, although it is possible to add a tricolor cartridge if the need arises. Canon supplied an optional CL-541XL cartridge, costing about £27 (US\$37/AU\$48) so we were able to test its color printing credentials too. It is worth noting, however, that this 15ml cartridge can print only 400 pages of color, while a bottle of black ink, costing £13 produces 6,000 mono pages. So it is 7p per color page and 0.2p per mono page. Some specifications are impressive, such as the formidable performance of 18,000 pages with the included black ink and the 250-sheetcapacity. other specifications, such as slow print speed and limited print resolution are disappointing. without airprint support and no driver for mac, Apple users should stop reading now. there is no google cloud print by the way, only canon pixma cloud link. to print from a smartphone, you need to download the free canon print app for ios / android. (Image credit: jim Hill)Setup and operation set this megatank printer is no longer difficult than the media cartridge printer and instructions, available in the box or through a qr sticker on the printer itself, are very clear. is just a case to remove all pieces of orange transport tape and then load the paper and ink.(image credit: jim Hill)Pouring a bottle of ink in the tank was a painless process for us, and it already feels like a much better system than the old inkjet cartridges too expensive. to get the printer into our local Wi-Fi network, we've taken a lot longer. the useful companion application allows you to type the Wi-Fi password in your phone rather than try to do it through the raw printer control panel, but for some reason we made more than ten attempts before the connection was made. If all the rest fails, there is at least one ob port available on the back of the printer, but note that a data cable is not included in the box. running, the canon pixma cloud print is quite quiet and rather slow. pages are printed at a reasonable speed,the treatment and turning of each page is weighty. The two-line display is difficult to read and without touchscreen control, it is not the simplest multifunction printer to use. Fortunately it was also reliably printed for the duration of the test, so there was not much need to use the printer interface anyway. (Image Credit: Jim Hill)Performance The Canon PIXMA GM4050 performed well in most of our tests, especially when it came to text pages. Kind looks exceptionally crisp and bold thanks to the use of a pigmented black ink. The Canon prints words with the consistency of a laser printer, but with a more daring and dark type. If only it could reach the speed of a laser printer this would be the best of all worlds. Unfortunately, the print speed is very slow even for an inkjet and the 13ipm claimed (imprint per minute) are optimistic. Black and white photos are handled reasonably well. They look more realistic than many laser printers, but not sharp as most inkjet printers. The Canon resolution is relatively low for a 600 x 1200 dpi inkjet. It's okay with text printing, but barely enough for photos. Our test images also suffered from horizontal bands. You can't upload your photo paper to this printer, so the photos that are very dark until you soak the paper in black ink. Fortunately, Canon's padded ink is relatively cheap, but if this was a cartridge-based inkjet, it would be thought twice about printing photos at all. (Image Credit: Jim Hill)Canon CallGM4050 as a mono printer and is what M stands in its model name, but with the optional color cartridge installed, we were able to print all our usual color test pages. It will not work as a photo printer yet, however, because it is not compatible with the photo paper and can not do printing without borders. What you can do is print decent color documents on those occasions when you really need color. The results are quite good, considering that the color was always a rethink for this model. The pallet is mute rather than bold, and there is the horizontal wrapping visible, but it is fine for most purposes. If you want to print more than one occasional color document, however, we point to the more expensive Canon Pixma G6050, which uses bottle color ink at a great effect. (Photo credit: Jim Hill) As a photocopier, the Canon PIXMA GM4050 has proven to be reliable, making faithful copies and offering useful features such as zoom and image reduction. You can blow A5 size documents on A4 paper for example and you can use the ADF to copy a stack of pages. We have not experienced banners, bent paper or jams during the test. final verdict Mono inkjet printers are an uncommon proposition and those that can be updated to print in color are even more rare. It is also unusual to find a printer that avoids AirPrint and Mac users so completely. Everything adds up to a niche product enough and still will make sense in some situations. Pagetext looks great and costs only 0.2p per side and the ability to add color on occasion could be useful. However, if you are looking for a mono inkjet then we invite you to check also the Epson EcoTank ET-M2140 that does almost everything that the Canon can, but much faster.
