How to use log graph paper

Something we didn't cover? Search the site by clicking 🔍 at the top right of any page. Or email us at support@hackernoon.com 📧 Have you ever wanted to show something's growth in an easy to understand way you actually can! It is called a graph more specifically it is a line graph. A graph is something that allows one to track something's growth much more easily than you could just by looking at the numbers. One example of a line graph is Shown below.You will need a pencil, graphing paper (if you do not have that then you can use a ruler and regular blank paper.) some data to make a graph with and finally yourself. A picture of graphing paper is down below.

First, draw a half square on your paper using the lines on the graphing paper. If you don't have graphing paper use the ruler to draw the half square The half square should be large enough for what you want to put on the graph. What I mean by a half square is shown belowThen add labels to the left and bottom lines that make up the half square. They have to be related in some way. For example the left line might have The number of people in New York. Additionally the bottom line must have something to do with time. The bottom line then would be the years of which the data was gathered. Another example would be of the left line had the temperature of a year then the. Bottom line would have the months of which were in the year. An example is done below After That place the data that you gathered as dots onto the graph. Finally after doing that you can connect the dots with a line so that you can see the growth and decline of what you are tracking. Congratulations you have made a graph. Here is where you need the use of equations to solve.We're back to the squares, but this one has a source that you need to make. To make it you have a vertical line, a hoorizontal line, and incrimment vertically and horizontally ranging from positive infinity to negative infinity.To put points on the graph you will be given coodinates. These coordinates are stated as (x,y). An example of that is (1,2) that is graphed one right and two up.Now say that you have 2 points (1,3) and (2,1) and you need to find out what the slope is. to find the slope you first label the coordinates, then follow the second image for the equation, and what you get is slope.What is you need the Slope- Intercept form, this fun little equation shows the direction that a slope goes and where it starts. this uses one coordinate and a slope.*if you don't have the slope, you can get it now* this equation is the same as the third image.to get the y-intercept or B, you need a coordinate (x,y) and a slope. then plug in the numbers and find out what B equals. last picture is a good example. This is another way of making 3D models of geometric figures, paper folding using graphing papers. I have made different models of platonic solids using popsicle sticks, construction papers and recycling papers. An Octahedron has 8 triangular faces. All faces are equilateral triangles. You will find out below on how to make equilateral triangles with pockets in each sides.This model is great for classroom displays, math centers, home decoration, math project, geometry project and the like.I have just started a YouTube Channel, if you like to see more like this project, please subscribe or visit me at alohagem's . graphing papersgluescissorPrepare 8 square papers. All sizes must be the same. Use the square papers to make triangles.The connector is 1/4 of the size of the square paper you use in making equilateral triangles. See attached video. Last Updated on February 11, 2021 Coca-Cola is an adored product the world over. While keeping yourself in good health means moderating how often you enjoy this drink, Coca-Cola lovers will be happy to hear that there are plenty of uses for the soda pop that don't involve ingesting it. Impressively, Coca-Cola can be used to help you clean, get rid of rust, and even help maintain your garden. Whether you are looking for a way to finally get rid of those pesky stains, or just want to find new ways to love this drink, these 20 jaw-dropping and unusual uses for Coca-Cola will blow you away.Kill pests in your gardenCoca-Cola is also an effective pest control method for your garden. To rid yourself of plant munching slugs and snails, pour a small bowl of Coca-Cola and place it near your garden or flowerbeds. The smell will attract these crawling bugs and the drink's acidity will kill them.Defrost your windshieldIncredibly, Coca-Cola can also defrost your windshield in the wintertime. Simply pour Coke liberally across your windshield and wait about a minute. The ice should turn to slush for easy removal.Clean your pansCoca-Cola is also useful in the kitchen, especially on burnt pans. For any pan with burnt on messes, pour a can of Coke into the pan and simmer. The mess should easily wipe away. You can also soak kettles and other kitchen items in Coca-Cola to remove scale and build up. Clean bugs from your windshieldAnother way Coca-Cola can aid in your car care is by removing bugs and gunk from your windshield. Soak a cloth in coke, then rub across your windshield. Just be careful not to get any on your paint job.Remove rust from your carCoca-Cola is also useful when removing rust. The simplest method is to dip crumpled tinfoil in Coca-Cola, then give the item a scrub and you should be rust free.Loosen rusty boltsSimilarly, use Coca-Cola to loosen up a rusty bolt. Simply unscrew the bolt half a turn and pour on Coca-Cola. Let it sit, then give the metal a wipe. The bolt and screws will be one hundred percent in no time.Remove stains from your fabricSurprisingly, Coca-Cola is incredibly helpful when removing stains from clothing and fabric. Coke will easily remove grease stains, as well as blood spots. Remember that Coca-Cola itself is brown, so stains on light fabrics might be better removed another way. Remove oil spotsAnother way to use Coca-Cola is to remove oil stains from cement. Whether it's your garage or your driveway, soak the stain in Coca-Cola for a few hours then hose off.Relieve jellyfish stingsShould you be unwilling to neutralize a jellyfish sting the traditional way (with urine) pouring Coca-Cola on the sting will also do the job.Clean your car engineCoca-Cola is also an effective ways to clean your car engine. Believe it or not, Coke distributors have reportedly been a fan of this technique for ages. Use it in cookingCoca-Cola is also a fantastic addition to many recipes. Using Coca-Cola to cook pot roast or steaks in will easily tenderize the meat for you. Mixing Coke with ketchup or barbecue sauce also makes for a delightfully sweet glaze. Clean your old coinsAnother way to use Coke to clean is to soak tarnished coins in the soda. About ten minutes should be enough to get rid of the muck.Clean your tilesIncredibly, Coca-Cola can also be applied to tiles to effectively clean grout. Let Coke sit on the tiles that need cleaning for a few minutes, then wipe away.Supercharge your compostCoke is also an impressive way to speed up your compost. The sugar in Coca-Cola feeds micro organisms, plus the acidity will help your compost break down faster.Remove gum from your hairCoca-Cola can also help you avoid a major hair disaster. If you have gum stuck in your hair, dip the gum into a small bowl of Coke and let it sit for a few minutes. The Coca-Cola breaks down the gum, allowing you to wipe it off. Fade unwanted hair dyeSimilarly, if you made a mistake with your hair dye, Coca-Cola comes to the rescue. It's probably best to get in the shower first, then pour Diet Coke over your hair. Let the soda sit for a few minutes, then wash your hair like normal. This method is effective in removing temporary hair dyes, but will likely only fade professionally applied dyes.Clean marker stainsCoca-Cola is also an easy way to remove marker stains from carpet. Apply a small amount of Coke, scrub the spot, then clean with soapy water. Again, remember that Coca-Cola is brown, so removing stains on white or light-colored carpets might be better achieved with another method.Clean your toiletCoca-Cola can also help you clean elsewhere in the house. To easily clean a toilet, pour Coca-Cola all around the bowl and let it sit. There's no need to scrub, simply flush and your toilet should be sparkling clean.Feed your plantsCoca-Cola is also a surprising way to add a little extra life to some flowering plants. Particularly with azaleas and gardenias, adding a small amount of Coca-Cola to the soil can deliver nutrients your plant may be low on.Get rid of bugs at a picnicThe last of our unusual uses for Coca-Cola is to safeguard your picnic or outdoor lunch from pests and wasps. Simply pour a small cup of Coca-Cola and set it out about a half hour before you start to eat. By placing the cup away from your site, bugs will be drawn to the soda and not your lunch.Featured photo credit: Omer Wazir via flickr.com how to use semi log graph paper. how to use semi log graph paper for gel electrophoresis. how to use log linear graph paper. how to use logarithmic graph paper. how to read log graph paper. how does log graph paper work. how to use a graph paper
