Selfie camera not working android

Why is the camera not working on my phone. Why is my front camera not working android. Why is the selfie camera not working. Why is my front camera not working on my android phone.

The camera becomes very important when we talk about Android smartphones. Maximum users are looking for a good camera so that they can acquire images and quality videos. Nowadays, selfies have become a trend and users click Selfies and share them with others. But most of the time, users reported the problem of the front camera does not work. This is very irritating as you can't take selfies. Users see a black screen or some type of notification allowing the camera. This type of problem has difficulty with users and should be fixed to the sooner. So in this blog, we will cover some feasible ways on how to fix the front camera does not work on Android and we also know why such an error occurs. User experience: Hi everyone! You need help here. Recently my front front camera doesn't work. I went to the app and deleted the camera settings. I tried the camera, clicked on the switch and brought me the main screen. I tried to find another help on this table, but the clearing seemed to lead to, but it doesn't do it for me. What else can I do some suggestions? Do you recommend factory reset? If I do, should I go to a VZW store? Source: Why does my front camera don't work on my Android phone? After experiencing such an error, users want to know why the front camera option has disappeared. Well, the camera on Android does not work because of the software or hardware problem. The software problem can be solved easily. Generally it occurs while starting an integrated camera or when you try to use a third-party app. However, there are few reasons mentioned below: less storage space can interrupt the camera from camera work incompatibility is still another reason why any type of third-party app installed on the phone can cause the error due to Less RAM in the device a little ram software problem or some technical error how can I adjust my front camera on my Android solutions - here, it's time to control best practices to solve the front camera does not work on Android. Visal them through one by one and find out what your way your way. Solution 1: Restart the Android phone every time you see that the Android phone's front camera doesn't work, it suggests you to restart the device once. This has the power to fix any type of glitch or errors on Android devices without any difficulty. Also, all the Apps running in the background are closed and your device starts again by cleaning the RAM. But if this method fails to resolve the error, then move on to the next one. Solution 2: Force Stop camera app If the camera continuously shows errors, then force the app stop once. Here are the steps to follow: Open the settings on the phone and click on the app or manage the apps now by moving down and search the App Camera after this, click on it and touch it to Force Stop to Force Stop. Next, restart the phone and check if the error exists new solution 3: Starting the device in temporary mode another solution that can help solve the error is to start the device in temporary mode. This will show you if there is some third-party apps that causes the error. Here are the steps to start the device in temporary mode: First, hold down the power button unless the power button is displayed on the screen now, click and hold the icon of the For a few seconds unless you restart in temporary mode, confirm the selection when the phone boots in temporary mode, check your front camera again. If you still show an error, then go to the next solution. Solution 4: Delete cache and camera app data Apply the cache and the camera's data card can fix the front camera does not work on Android. Follow the following steps: First of all, Open Settings> App & Notifications> Click All Apps now, select the Camera app from the list after which, open the storage option here, click Delete Cache and finally delete i Data, restart the phone and see if the problem is solved 5: check the permission of the camera camera app You must allow permission to use the particular apps. So in such a situation, if you meet to Room does not work on Android", then indicating the permission you have to grant. You simply need to go to settings> apps and notifications> App permissions> Click on the camera. Here, deactivate The bar of all apps leaving the camera for the camera. Doing this will help you check where the problem is and if required, then grant permission to access it. Solution 6: Remove the battery from the phone nowadays, Most smartphones are supplied with a non-removable battery. But if the device battery is removable, this method is for you to correct the black screen on the front camera. Just extract the battery from your device and leave it for some time . Then again, insert the battery back into the phone and turn it on. Now check if the same error is checked or is fixed. Solution 7: uninstall third-party camera applications Most users install app for third-party camera on their devices from Google Play Store. Those apps have extra characteristics compared to those incorporated. But these apps can sometimes open an error and your face the camera does not work on Android. Therefore, if you have any of those apps, so you don't uninstall them immediately for one and then check if everything works well as before. Solution 8: Restore app preferences Another simple way to get rid of the error is to restore app preferences. This helped many users solve this kind of problem. You must follow the following steps: First of all, open the settings on Android Phone> Then Apps or App Manager now, Open All Apps, and then click the Next menu icon, click to RESET App preferences to RESET. This will reset all the apps and their settings and hopefully, the error will be resolved immediately. Solution 9: Checking the software update The front camera does not work on Android can occur even if the device is not updated to the most recent version. Most of the time, it happens that due to system updates, some apps do not work. So you need to check the updates by going to Settings> System> System Update> Online update. If there is some available update, download it and after updating the device, see if the problem is solved or not. Solution 10: Run the factory reset If nothing works for you, then the last option suggests is to make a factory reset. This will completely reset your device completely and all types of errors will be solved. But the important thing to note here is this method will delete all data from the device. So it's better to create a backup of all things before proceeding in front. Open the settings on the phone after which, Open System> RESET Option LA to, you will receive the factory data reset> Restore the phone that is now the phone will delete all the apps and data and will be a new phone. Solution 11: Get the device to repair the center if you don't get any way to resolve the error because your hardware is related, you need to visit a repair center. The front camera continues to crash on Android can be fixed later to explain everything to the expert. Perhaps the camera requires a replacement or another problem will be solved easily there. Solution 12: Early solution To fix the front camera does not work on Android with a click, apart from all the manual methods above, I have an advanced solution to get rid of the error. You can further reach us through our social sites like Facebook and Twitter Sophia Louis is an experienced and professional SEO Blogger. You love writing blogs and articles related to Android & iOS phones. She is a founder of the recovery of Android-IOS-data-recovery and not always see forward to resolve issues related to Android and iOS devices if you have problems with cameras on your smartphone or tablet, is usually frustrating as losing a little 'Other functions of the device. But all we rely on our cameras for phones to help us capture significant personal moments, events, documents and share information with others. Before seeking professional repair for your device's camera, take a few minutes to try to identify the problem. Often, you can return the device to normal with a few simple steps. The process for resolving problems with a smartphone camera problem varies somewhat, depending on whether you have a Samsung Galaxy, LG, HTC, Android, iPhone, or another brand. The process is also a bit differently based on the fact that you have problems with the front camera phone, the uprising rear camera or both. General tips for troubleshooting A camera smartphone Problem if Get a black screen when you try to use the camera, start with the obvious problems (yes, check). Your phone case or something else blocks the goal? Close and reopen the app for the camera. Close all other apps you've opened. Make a soft reset or reboot your device. Make sure you are going for most current operating systems, and you've updated your app. Make a hard reboot. Clear the cache, if your device offers that option. If you have more than one app for photos, a different test to see if it works. Try walking in your front and rear cameras, to see if the problem is isolated to one or the other. If you make an image but is fuzzy or blurred, take a moment to wipe the lens with a soft cloth, microfiber or a special lens. Tips for troubleshooting a problem with FLASHIF camera The camera works, but is not the Flash function, start Checking if you have turned the Flash function, and that nothing is blocking the flash (As your phone case). So, try to clean the flash lens. Test the Thotlight function of your phone because, in most devices, the light source is the same for both. If you have an iPhone, some users report success by setting the camera to the App localization services to Never. Never can not be hurt to try, and it only takes a few seconds. It's also important to note that, after using the flash for a long period of time or use it in a very hot place, it may disable it As long as he does not have time to cool off. The app of the party is a known issue with Android flash problems. Try to remove and again your flash test. It is also possible to encounter problems if the levels of RAM memory or of the device are low. For users of Samsung Galaxy, a flat battery will prevent the flash to work.
