Bollywood movies download sites free

By Liz Jacobs
Mozilla Firefox is a Web browser similar to Internet Explorer or Google Chrome. The browser is a part of the Mozilla Application Suite. Firefox makes downloading movies simple because once you download, a window pops up that lets you immediately access the download. Downloading a movie in Firefox is very similar to downloading a movie in any other browser. However, the download window looks different because Firefox has it's own unique browser interface. Go to a site like Netflix, Movie Downloads, #1 Online Movie Downloads, Joost or Hulu. (See Resources and References). Sign up for the site. Some sites offer a 30-day free trial. Some sites listed are completely free. Select the category "Films." Click on the film genre you want to see such as comedy, drama or horror. Click the particular film you're interested in. Click "Download." Some sites, such as Hulu, don't include a download button. Their movies stream over the net. To download them, go to a site like KeepVid, Video Downloader or Vidimonkey. Copy the URL of the movie you'd like to download. Put the URL in the box on KeepVid, Video Downloader or Vidmonkey. Click "Submit." and your movie will begin downloading to your computer. Click on the file from the download window. Click "Open." Your movie will begin playing. Get all the best moments in pop culture & entertainment delivered to your inbox. Get all the best moments in pop culture & entertainment delivered to your inbox. Some streaming services have existed for years without the option to download shows and movies for offline viewing, but that functionality was available on Day 1 on Disney+. There are more than 600 titles to dive into, enough to binge hundreds of hours of The Simpsons without watching even a fifth of what's available. Perfect for plane rides and frugal data spenders, the service's download function — which is exclusive to the mobile apps as of this writing — is so simple even Olaf could use it, and with every title eligible, it's just a matter of figuring out what you want. Here, we'll take you through the process of both downloading and deleting movies and shows from your Disney+ app. Explore Disney+ Downloading movies and shows on Disney+ Step 1: Select your download quality Before we have our fun, let's talk about file sizes. If you're hurting for storage space on your iPhone or Android smartphone, Disney+ includes a variable quality feature that allows you to sacrifice visual fidelity for a smaller digital footprint. Open the Disney+ app on your smartphone (iOS, Android) and click your profile icon on the bottom right. From there, navigate to App Settings > Download Quality. You'll see options for standard, medium, and high, the latter likely offering no higher than 1080p resolution. Step 2: Download your content Because you can view every Disney+ title offline, no guesswork or filter is required to find downloadable content. The hardest part of this particular task is figuring out what you want to watch. Once you've figured that out, all you'll need to do from the movie or show's listing is tap the download button, which is situated far right of the Play button beneath the title's logo. For shows, you can also find a separate download button next to each episode if you don't want the whole season. Disney takes care of the magic from there. It's a relatively quick download on Wi-Fi, especially at the lower qualities, so you can probably snag dozens of movies in those couple of hours before your flight if you forgot to do it the night before. Step 3: Watch your downloaded movies and shows All that's left to do now is enjoy yourself! An easy way to find your downloads is by hitting the download icon, which is always visible on the bottom right of the Disney+ app. All of your content will be listed here, sorted by when you downloaded. Tap the play button on the thumbnail of whatever you want to watch, and off you go. Episodes are listed a bit differently — they're nested under a single label, and tapping it will present all of the episodes you've downloaded for that show, grouped by season. You can also find these titles through regular searching and browsing. You'll know something is available for offline viewing if you see a smartphone icon where the download button usually sits. How much space do I need? The amount of storage space each title eats is based mostly on video length and resolution, and with other variables playing into the equation — the biggest being your quality setting — this number can vary greatly. We downloaded three movies of similar length and resolution — a few of the Star Wars films, which clock in at just over two hours each — to see how each of the options affect file size. The Empire Strikes Back at standard quality was 0.92GB for a 2-hour, 7-minute runtime, while A New Hope at medium needed 1.4GB for 2 hours and 4 minutes. That's a modest jump compared to Return of the Jedi on high quality, which needed 5.5GB for 2 hours and 14 minutes. For shows, a 39-minute episode of The Mandalorian on high quality takes 1.5GB, but just 270MB on standard and 424MB on medium. Finally, at a 3-hour, 1-minute runtime, The Avengers: End Game needs a whopping 7.1GB. Using the data above, you can work out a rough estimate of how much space you'll need to store everything you want. You can mix and match by adjusting your quality setting before you initiate the download. Now would also be an excellent time to set whether you require a Wi-Fi connection to download content, an option those on limited data certainly should consider. Disney+ enables Wi-Fi-only downloads by default. What's available? As explained above, everything in the Disney+ catalog can be downloaded for offline consumption. Whether it's an entire season of Darkwing Duck or every single movie from the Marvel Cinematic Universe, if it's on Disney+, you can download it. Unlike some other services, Disney+ is pretty loose for restrictions. For starters, you can download a single title on up to 10 different devices at a time, and you can download any of them as often as you want. The only thing Disney asks is that you connect to Disney+ every 30 days. How do I delete titles? Eventually, you'll want to make room for something new. Whether you wish to delete a single title or a bunch all at once, Disney+ makes the task delightfully simple. Step 1: Deleting a single title When you want to wipe titles from your device, the process is much more straightforward than downloading files. In fact, it will take you just a couple of seconds to delete something from Disney+. First, find your content by heading to the downloads section. You can access the download area by tapping the second icon from the right on the app's navigation bar. Find the movie you want to delete and click the smartphone icon to the right of its title. Select Remove Download, and the title will escort itself right off your smartphone's storage. If you're deleting a select few movies or shows, this is a simple way to do it. Step 2: Deleting all titles You have a couple of options for removing titles from your Disney+ page altogether after they have been downloaded. Within the Downloads section, you'll notice an Edit button on the top right-hand corner of your screen. Select Edit and, quickly, several squares will begin popping up next to each movie or TV title on your screen. You can click on those squares to select a specific title or choose several content options simultaneously. Click on as many squares that you would like to delete as you want. After making your selection, tap the trash icon to remove them permanently. In just a few clicks, you can modify your library to appear as you'd like. If you'd prefer to delete all of your downloaded titles, click on the Select All button to highlight every title. Then click the trash icon. If you accidentally highlight all of your titles but wish to un-select them, just tap the Select All button a second time. If you're looking for a faster way to mass-delete options, Disney+ does have a feature you can use. Tap on your profile icon on the bottom right of the screen. Then navigate to Settings and select Delete All Downloads. This option will trash all of your titles with just one single click, which will quickly free up space for whichever new titles you'd like to download next. Editors' Recommendations Downloading movies is a straightforward process that's easy for anyone to tackle, but you should be aware of a number of components before starting. You want to make sure your computer is prepared for the download, that you have the right software, and that you're downloading the right kind of movies. Downloading is not the same as streaming. Knowing the difference between downloading and streaming might save you lots of time, and there are important benefits and disadvantages to both. One of the most important things to remember when downloading movies is that they might be really large. Although it's common for movie downloads to stay under 5 GB, some of the super high-definition videos might require 20 GB of space or more. For reference, most newer hard drives come with 500 to 1,000 GB of space. Before downloading a movie, check that you have enough free space. One easy way to see which files are hogging all the storage is to use a disk space analyzer. If you can't move any existing files off of the primary hard drive or delete anything to free up space, you might end up having to store the movie on a different hard drive like a flash drive or external hard drive. Since movies are some of the largest files you can download, they take much longer to save to your computer than a regular file like a song or image. One way to make sure your entire network doesn't slow down in the process is to use a download manager, especially one that supports bandwidth control. Download managers are helpful not only in categorizing and storing downloads but also for limiting how much bandwidth the downloads are allowed to use. Since movies usually take a while to fully download, they tend to suck away bandwidth from other devices on your network in the meantime. If, while downloading movies, other devices on your network are slowing down, videos are buffering, and there's a general sense of lag, configure the download manager to limit the downloads so that they can only use a fraction of all the available bandwidth, like 10 percent or 20 percent. It's also possible that your internet connection simply doesn't support fast downloads. For example, if you pay your ISP for a 2 MB/s download speed, you can download a 3 GB movie in around 25 minutes. If you want to be able to save a movie of the same size in just five minutes, your network must support speeds as fast as 10 MB/s. You can test your internet speed to make sure you're actually getting what you're paying for. Movies downloaded through torrent websites have a high risk of adding malware to your computer. Make sure your computer is secure with an antivirus program to catch any threats before they can do damage, and always do regular scans to check for malware. In addition to anti-malware software, it's important to educate yourself on how to spot a fake torrent or fake download website. Fake movie downloads will attach a nonvideo format file extension like .EXE or .MSI at the very end of the file to trick you into opening a program instead of a video. Normal video files usually end with .MP4, .AVI, .MKV, or .MOV. Another component to watch out for when downloading movies is the size of the file. If it's too small, like less than 300 MB, then the video is probably not real. Most movies are much larger than 300 MB and usually end up falling in the range of 700 MB to 5 GB. It's common to download a movie and then not know how to open it. Some movies are in a file format that no program on your computer knows how to open. Fortunately, you can pick from plenty of absolutely free video players that will support the movie format. One of the most popular freeware video file players is VLC. You can use it to play common video file formats like MP4 and AVI, plus others like MKV, MOV, WMV, and many others. Stick to this program if you're ever unsure how to play the movie you've downloaded. Some movie downloads are 100 percent fake and will try to convince you that you have to install their special software program in order to see the video. They might even start showing the beginning of the movie and then stop and display a message about how you don't have the right program installed. Unfortunately, those kinds of videos are not real videos at all. They're made for the sole purpose of tricking you into thinking that if you buy this or that, or click a certain link, the movie will suddenly start playing. It's tempting to try to follow the directions and activate the movie, but remember that they are not real; the movie does not really exist in that file. Ignore those messages, delete the video, and try getting the movie elsewhere, preferably through a more reputable movie download website. Thanks for letting us know!
