Somewhere beyond the sea sheet music pdf

Sheet music is the format in which songs are written down. Sheet music begins with blank music staff paper consisting of graphs that have five lines and four spaces, each of which represents a note. Songwriters who compose songs in standard musical notation use staff paper to create sheet music, which can then be passed on to musicians who interpret the sheet music for a music performance. Today, making your own sheet music is easier than ever. With notation software such as Finale, or the free web-based Noteflight service, anyone can turn their musical ideas into professional music sheets. Use Noteflight to get started (see "Resources). Noteflight is a free web-based music notation service that allows you to write, print, and even save your sheet music as music files for playback. Noteflight has a clean, easy-to-use interface that makes it possible for even a beginner to create a song in sheet music. Since Noteflight allows you to listen to to what you've written, you can experiment with different notes until you create something that sounds good, even if you are unfamiliar with music composition. Create a Noteflight account and log in to begin creating your sheet music. You can begin writing your song immediately. At the top of the page, located on a toolbar, click "New Score" to create a blank sheet music document. Select whether you want your sheet music private or shared. Noteflight presents you with a blank music sheet in the Key of C with a 4/4 time signature. Click "Edit Title" at the top of your sheet music and type in the name of your song, then click "Edit Composer" and type your name. Make any changes necessary to your key signature on the "Score" menu with either the "Change time signature" or "Change key signature" command. Add notes and rests to your sheet music by clicking on the blank music staff. A notehead appears, and you can drag and click where you want the note to appear. You can also use the floating palette to select different note durations. As you insert your notes, Noteflight will automatically reformat your sheet music to keep the proper number of beats per bar. To listen to what you have written at any point, go to the "Play" menu and select the playback option you want. Print your song. The result will be a professional score of your song composition. You can also use Noteflight to make an audio file of your composition. Noteflight lets you assign actual instrument sounds to the appropriate parts. Go to "File" and select "Export" to save your finished sheet music as an MP3 or way file. This allows you to take an example recording to your band. Musicians of the world, your dreams just came true. Some kind souls have come up with a Kindle for sheet music, and it's called the Gvido — a dual-screen E Ink device that digital scores organized, and all those binders of loose leaf paper from exploding time and time again. The brain child of the Tokyo-based company Terrada Music Score, the Gvido consists of a 13.3-inch "Mobius" flexible electronic paper display, approximately the same size as your actual sheet music, with a resolution of 1,200 x 1,600 pixels. But now, instead of flipping through physical pages, you can swipe across this thin, lightweight device as you make your way through a piece. The Gvido claims to support a long period of use due to the low power consumption of its e-paper, and thanks to its Wi-Fi and Bluetooth functions, you can actually purchase scores directly from the internet, and download them to your device. And don't worry — if you like to make annotations in your scores, you'll still be able to do that with the Gvido. According to the company, the device comes with a digital pen that allows users to make notes directly onto the e-ink page, and save any markings in a PDF file format. Its microSD card slot and internal memory should also provide plenty of storage space, supporting your exploration of musical compositions from the Baroque to Contemporary periods. Sadly, there's no automatic page-turning functionality (which is really what we need), and a demo video does suggest that the page-turning process (you tap or slide your finger across the device) is a bit slow. All the same, it may just be one of the most exciting tech innovations made for musicians in recent memory, so if you're tired of trying to organize reams of sheet music on your shelf, consider the Gvido instead. Editors' Recommendations Each December, the sun sets over northern Norway and doesn't reemerge until late January. But this past winter, a fiery vista of reds and oranges pierced the darkness. It wasn't the northern lights, at least not the natural ones. It was the flare-off from the Snøhvit gas field, the first major Arctic fossil-fuel facility outside of Alaska. The Arctic holds up to 25% of the world's untapped natural-gas and oil reserves — one reason Russia planted a flag by submarine last year on the North Pole seafloor, and Canada, Denmark, and the United States have tussled over territory. But even if you control the seas, how do you get the goods beneath them? StatoilHydro, the Norwegian energy giant, puzzled over that for years after finding Snøhvit (Norwegian for "snow white") under the Barents Sea in the 1980s. Now technology has enabled it to build the world's longest undersea pipeline and wells operated remotely from the island of Melkøya. The gas, destined mostly for the United States, began flowing a few months ago. Snøhvit is just the beginning of the Arctic's adventures in energy. Russian gas titan Gazprom has awarded StatoilHydro a 24% stake in its Shtokman field, also in the Barents. That field, which holds at least 15 times more gas than Snøhvit, is more than 200 miles farther from land. But going that distance is no longer a pipe dream. CABLE SERVICE Melkøya connects to the wells via a 90-mile umbilical line. The communication cables are fiber optic, which carry more data over longer distances than copper AT THE SOURCE The gas and some water shoot out of the wellheads at a pressure of around 260 bar — enough to drive it down the pipe to land. At high pressures and low temperatures (the water is around 39 degrees Fahrenheit), gas and water can form a gummy slush called "hydrates," so antifreeze is constantly pumped into the wellhead. SAFETY FIRST Snøhvit's first-of-its-kind safety system features multiple backups. If communication lines fail, signals can be sent to the wells through power cables. If those die, then a ship, always on standby, can hook a new line to the wells and provide an interim satellite linkup. The high-tech Snøhvit facility on Melkøya requires only 400 people — significantly less manpower than a traditional offshore platform. Just four technicians are needed to remotely operate the gas wells. LAND HO Once on land, the gas goes to a slug catcher, which removes the water and antifreeze. The antifreeze is recycled and pumped back to the wellheads. The water, which will go back to sea, first runs into a tank filled with microbes that devour pollutants. CAPTURING CO2 StatoilHydro boasts that Snøhvit is the world's most environmentally friendly liquefied natural gas (LNG) plant. At other LNG plants, the CO2 extracted from the gas goes into the atmosphere. At Melkøya, 700,000 tons of CO2 is captured and injected into sandstone 90 miles out to sea — the first time this has ever been done from an onshore facility. But the environmental group Bellona cautions that millions of tons more are still released into the air. LIQUID ASSETS After cleaning, the gas goes into a "cool box," where it's chilled to -261 degrees and liquefied. Snøhvit's technology — and the availability of cold air and water to aid refrigeration — means that the cooling is 20% more energy-efficient than at any other plant. NEW BUILD The Arctic conditions and lack of infrastructure meant that the complex gas-cooling plant couldn't be built on Melkøya. Instead, it was assembled on a barge at a Spanish shipyard, moved to Norway, maneuvered into a custom-built dock, and cemented into place. The LNG goes into two 160-foot-high tanks before being loaded onto ships destined for either the United States or Spain. StatoilHydro expects the shipments to gross around \$2.7 billion a year. Music stand They were having a sale at the music store on the same music stands they use in real orchestras, or so they say. They have heavy non-tilt bases and simple one handed lift and table tilt adjustments. The only thing I would have appreciated more was a heavier grade sheet metal on the easel part, and maybe metal instead of plastic tilt fittings...you get what you pay for...IKEA JANSJO LED table desk lamp The lamps come finished (IKEA is Swedish) in a few bright colors so pick one that you like. I'm not sure what the LED lamp is rated at but it is probably a 1 or 2 watt light which is actually very bright. It runs pretty cool. The wall wart adapter electronics is in the wall plug end. It has an inline on/off switch. Note that there are two models or versions of the desk lamp. One is in a more compact box and the other is packaged in a longer box. The difference is the way the flexible shaft mounts to the base. The one in the short box are configured with two mounting posts with screw bolts. The longer box contains the version of the lamp which the flexible shaft has threads cut into it so it is mounted in the base by securing with a nut. I picked the short box one with the two mounting posts so it would resist the torque better and not work loose when mounted. They also have the same lamp "head" or light unit already attached to what looks like a giant spring clothespin instead of a heavy desk base. The flexible shaft is a little thinner and shorter. But it costs \$30US as opposed to \$10US. Why do you get less but spend more? I went for the \$10 version. There is also a similar type LED lamp SUNNAN that has a solar cell for \$20 but I found it a hassle to move it back into the sunlight to recharge the lamp battery. You could adapt that lamp if you needed something more portable.. The other bookcase shelf lamps needed too much work to mod it to fit and adjust for a music stand. Filler plate I will not be using the base that comes with the lamp, There is a heavy iron core disk and the sheet metal cover that goes along with it. I will make a custom filler plate that makes up the gap of the iron disk so that the lamp can be positioned and fastened directly on the music stand. You can make this filler plate out of most anything rigid, metal, wood, plastic... I used some tiny hardboard scraps from my TARDIS project to make the filler plate. I had some silver spray paint laying around which I use to dress up the filler plate. The leftover Krylon gold paint from my Stargate gong would have been too gaudy, but some people like that Lexus emblem touch. You need a drill/driver with various drill bits.CAUTION: Know how to properly use power tools. Metal shards from drilling the music stand should be disposed of carefully. The non-slip sandy finish on the music stand may have some sharp edges. somewhere beyond the sea sheet music pdf. somewhere beyond the sea sheet music free. somewhere beyond the sea trumpet sheet music. somewhere beyond the sea violin sheet music
