Pokemon go android emulator 2020

Pokémon GO has quickly become one of the most downloaded games for smartphones. If you enter the Google Play Store, you'll see that it's in the Top10 of games in the store and also in the Top10 of most profitable applications. It is also true that its creators, Niantic, Inc., have not released the PC version, which would be equivalent to Pokemon GO for PC. But what we can do, if we want, is play this game on a smartphone or tablet with an Android or iOS operating system, or on Amazon's Kindle Fire. But because on the Internet there is always a solution for almost everything, we don't have to worry; we have the option to download free Pokemon to use for BlueStacks and play. This tool, BlueStacks comes to be an Android emulator for PC. Thanks to it, we can play and use our favorite applications from our own computer. Download Pokemon Go for PC with BlueStacks BlueStacks is an application that is available for Windows Vista, XP and Win 7/8; as well as for Apple and its Mac OS X operating system. The first thing we have to do is enter the BlusStacks website and download the application for the operating system we use. If we want to install it for example for Windows, we have to click on the blue button at the top right where it says «Download BlueStacks». The next step is to download and install BlueStacks (I warn you that this step may take a few minutes). When it is fully installed, we need to give the BlueStacks app permission to sign in to the Google Play Store with our Google Account. Similarly, we will need to enable BlueStacks for Apple devices. Once this step is finished, we can now search the BlueStactks Pokémon GO in either the Google Play Store or the App Sync. Now that we know how to download Pokemon Go with BlueStacks, we can open it and start Pokemon Go for Android. Have you seen how it's done? Although the game creators have not released a PC or computer version, it is possible to play PC Pokemon thanks to BlueStacks. If you want to see the whole process in images, so you don't have any doubts, here is a video in which you will see how to download and then install BlueStacks. Video – PlayPokemon for PC with BlueStacks Download PC Pokemon GO for PC with Andy There are many other free emulators on the web; and one of the most widely used is Andy OS, which allows us to download the bulk of Android and iOS apps and games directly to our PC or computer. With Andy OS we'll be able to run Pokemon GO without any problems, as if you were running it from your smartphone or tablet. It should be noted that this emulator provides us with unlimited storage capacity. Besides being compatible with Windows, it is also compatible with Mac computers. Our own smartphone will function as a remote control when running applications and games from the emulator. Andy OS is very popular with users, as much or more popular than BlueStacks. If you want to have a good experience running and playing Clash of Clans from your computer, Andy OS is a safe bet. We don't want to leave without you watching the entire process in video download, installation and use of Andy OS. So you can get it all straightened out… Take advantage and enjoy the video! Video – Download/Install Andy to play Pokemon GO from PC See how easy it is to download Pokemon for PC? There is no barrier to playing Pokemon from your computer with emulators like BlueStacks or Andy. Don't wait to download PC Pokemon GO and all your favorite apps and games! Pokemon Go APK (2020)-Download Free For PC and Mac is the most played and on-demand video game developed by Niantic. As we all are the huge fans of Pokemon, so the developers thought of creating a game based on this cartoon. This game is praised worldwide and free to download and includes more than 140 Pokemon Go species. But as time passes, the developers have exceeded the limit of Pokemon species to 480 until now. These Pokemon species are very adorable and powerful with multiple talents. Pokemon games for emulator download is popular among people because of its high definition screening and real graphics. You can now play this game with additional features such as swapping Pokemons between trainers, make friends with each other in the game. As well as you can get hold of legendary Pokemons during special events. You can capture these Pokemon in the town and train them to defend you at the time of the battle. Moreover, you can also coach the Pokemons at the gym and make them fight with each other. This is a great game to play and you can also download it for PC and Mac with Bluestacks emulator. Gameplay Of Pokemon Go APK (2020): You can create a game account on the Pokemon Go and customize the avatars available there. After creating the avatar, it can be seen on the player's geographical location map. You can see these avatars on the map, moving as you move in the game. For example, the Water-Type species of Pokemons live near water areas. Whenever a player captures a Pokemon, you can see the avatar image with the activated AR mode. You can also share the screenshots with your friends whenever encounter a new Pokemon species. Different species of Pokemons live in different places according to the type of environment The map shows two icons such as Pokemon Gyms and PokeStops. The Pokemon Gyms are the battle locations for team-up matches. On the other hand, PokeStops are equipped with Lure Modules that becomes a source of attracting rare and occasionally seen Pokemons. The player can capture a wild Pokemon by flicking the poke ball on it. After capturing it successfully, you can train Pokmon the way you want. And you also get prizes of Candies and Stardust after capturing a new rare Pokemon. There is also a development of new feature i.e Buddy Pokemon. This feature lets you pick a Pokemon that can be shown on the profile screen with the player. You can also read online download best android games PC. Features of Pokemon Go APK (2020): You can search, capture and collect many rare Pokemons in various places. Capture as many Pokemons as you can in order to complete Pokedex. Train your Pokemon at the gym and set battles with the rivalry Pokemons. Have a look at the poke stops for gathering potions, berries, poke balls, and other accessories. You can play in teams with others to capture new pokemon during a raid battle. Earn experience and fight to increase the level of the game for stronger battles. Pokemon Go APK (2020)-Download Free For PC and Mac Unofficially With Bluestacks: You can also play Pokemon Go online from www.pokemongo.com. And also download it with an unofficial method that is with Bluestacks. Bluestacks is the emulator that runs android apps on PC and Mac. So, if you also want to play Pokemon GO on PC then check out the full article. Also Checkout:Download Lords Mobile For PC/Laptop [Latest] About Pokemon GO Pokemon Go has taken the world by storm as it Runs through the real world and catches all the Pokemon. It uses augmented reality technology and it brings Pokemon to life. The Train develops your Pokemon for gym battles in your own neighborhood. It is hard to get someone who has not played Pokemon Go as from past few timea game took storm in the world. Do you want to play this game on your PC or Laptop? Then yes you can play by using some Android Emulators. This game gets updated on time. Let us check out how to play Pokemon GO on PC or Laptop. How To Download and Play Pokemon GO on PC? To play Pokemon GO on your PC, you need to install and set up a few tools in the right order. If you have a MacOS system, then it is great, and if you are using Windows, then you need to install Virtual MacOS by using VMWare. Method 1: For MacOS or Windows by using VMWare. If you are on MacOS, you need to have the latest MacOS If you are on Windows PC, you need to install MacOS through VMWare And when all these things are proper, then download the latest version of Xcode Now, download the Pokemon Go from the given link. Method 2: For Windows Only using Emulator By using the Emulators you need to first a Windows PC. Then you can install a few Android Emulators and start playing the game on your PC or Laptop. 1. By Using BlueStacks Emulator Bluestack emulator is one of the most popular emulators which is used by almost everyone. It is very easy to use and the best one so for many this is the first choice. First of all download the BlueStack from the official website or from the given link Once it is downloaded, install the file on your PC After installation, Sign Up with your Gmail ID or create a new one Then in Bluestacks Go to Home then System Apps and then Play Store There search for Pokemon GO game and download the app by Niantic, Inc Now, restart the Bluestack Again open Bluestack and launch, you will find a navigation bar at the bottom You will see a GPS icon at the right bottom corner click on it Do not close the location app and click on the Home button Now, you can play Pokemon Go Login to your Pokemon GO trainers account and start playing the game Play Pokemon GO On MacOS If you are looking to play Pokemon GO game on MacOS the here, we find a great method for you. If you are a regular user of MacOS then you might be ,aware of Xcode. Xcode is an integrated development environment for Mac which contains a software development tool which is developed by Apple. On the internet, you can see many guides about using Xcode for playing Pokemon GO on PC but all those guides are very difficult to understand. According to those guides of Xcode, you need to make a route, compile the gps file and then add it, to Xcode. It works properly and helps to collect pokestop items. But when you want to change your route you will get a problem. Like, if you see a gym and you want to check out but it is not your route then you need to guess where it is on the map, find the coordinate and make a GPX file and then import it. Many times, you miss the target and you need to do all the process again. First thing, make sure MacOS and Xcode are updated to the latest version Then Download the Pokemon GO from the given link and source code (zip) Open the program 'pokemongo-webspoof' and it needs to be open with Xcode In Xcode sign in with your Apple ID You need to trust your ID on your iPhone and enable 'pokemongo-webspoof' on your Mac. Enable it by going to System Preferences then Privacy and then Accessibility Now, connect your iPhone In the Xcode, see on the top left corner "Generic iOS device" there select your iPhone and click on the left It will say "Build Succeeded" Go to top tabs and select Debug then Simulate Location and then select Pokemon location On your iPhone, you will get a white screen pop up which says to start the game. Final Thoughts Hope you enjoy playing Pokemon GO on your PC, we tried to list as many as method as possible, still if left something please let us know, we will try to cover it here. At the end of this post, I have provided a YouTube tutorial which will guide you the changes to be made in your Nox App Player to play Pokemon Go for PC! Check the below-given procedure to know how to download Pokemon Go PC game and how to play it without any hassles! Download Pokemon Go PC Game on Windows 10 using Bluestacks or Nox App Player Before playing take a note that Pokemon Go for PC is available in the selected countries. So make sure that you change the default geolocation in your Bluestacks to the USA or any other country where the game is officially released! So here's how you can start the Bluestacks Pokemon Go PC download! #1. The first thing is to Download Bluestacks installer file from here. Once done, install Bluestacks and sign in using your Google Play account. Next, install Pokemon Go using the built-in Play Store. #2. Once you are done with the downloading process, launch the game and change the geo-location so that there ain't any restrictions for you if the game if not released in your country! #3. Once you change the Pokemon Go PC settings in your Bluestacks, it's time to get into action now! #4. Now that you have changed the location, you will now be able to find the Pokemon Go characters around you. Just pick your favorite one, find someone to play with and start the war to collect more in your Pokedex! #5. Keep moving, keep hustling around the world to get the best of fighters in your team. It's an adventurous journey to start with. I am sure you will have lots of fun and at times, you will remember your school days where you used to watch Pokemon Cartoon. So now that you know how to download and play Pokemon Go PC game, it's new time to have a look at the minimum system requirements to run the game in a smooth way! Minimum System Requirements to Install and Play Pokemon Go on Bluestacks or Nox As the game is highly graphical, tracks your location and lets you go anywhere to search your favorite Pokemon, it takes a lot of space on your laptop or computer. So to make sure the game don't stuck in between, you need to have the below-given system requirements on your PC. And most importantly you most have Bluestacks. #1. Make sure that the RAM in your Laptop or Computer running on Windows 7/8/10 is at least 2GB #2. The processor must be above 2.2 GHz and it would be better if you can go with i3 or higher versions #3. Minimum of 2GB disk space is required to store the game #4. And last but not the least, the Graphic card must be at least of 1GB. Although, 2GB video memory will perform well! So these are some of the system requirements to play Pokemon Go Bluestacks game! Just hold on, it's not over yet! There's more to this post guys! Before you start playing Pokemon Go for PC game on your Bluestacks or Nox Player emulator, you need to note few points to play safe! Latest: Pokemon Go APK Download Take Care of These Things While Playing Pokemon Go Nox on Your PC! This game is just a trail version of original Pokemon Go game. So Nox App Player doesn't guarantee that game will run all the time. Which is the location which you use will decide how long the game will run on your PC. Don't move too long when you are playing Pokemon Go on Nox! It may result in Ban as it might be considered as abnormal action. And if the Pokemon always run away from you, maybe it's due to ban. So make sure that you don't get banned from it. Of course, the ban will be removed after half an hour. But still, beware! As said, this is just the trial version, you just wait for the official release to get the perfect results for all countries across the globe! These points were taken from the official Twitter handle of Nox App Player. Thanks for letting your users know about these attentions. FAQs Here are few frequently asked questions by Pokemon gaming freaks! I've tried my best to answer the most of them. #1. How to get Pokemon Go to work on Bluestacks? Whilst a lot of users are facing authentication issues while playing Pokemon Go on Bluestacks, I've found that re-installing Bluestacks and sideloading latest APK file of Pokemon Go can solve this issue. #2. Can I Play Pokemon Go on PC? There are a plethora of Android emulators available these days but the best that works are Bluestacks, Nox Player and MeMu emulators. So yes, you can still play Pokemon Go on PC using these emulators. #3. Can I download Pokemon Go on my laptop? Yes, you can download Pokemon Go on laptop just like you do it on your computer with the help of Bluestacks or Nox Player emulator. #4. Is Bluestacks Legal? Bluestacks is 100% legal until you do not use it in any wrong work. Used to play games and use Android apps on PC, it's completely fine, but if you're using it to modify a device's hardware, it's considered illegal. #5. Can I install Google Play on my PC? Of course, there's no direct way to do it, you can still use Google Play on PC using the web version. But to download it, you need to use Android emulators like Bluestacks, Nox, MeMu etc. #6. How to play Pokemon go on PC without emulator? To play Pokemon GO on PC without an emulator, you need to install any third-part simulation software like iAnyGo, dr.fone – Virtual Location, etc. Take note that these simulation software are sometimes limited to iOS only. Conclusion of Pokemon Go for PC So, I hope that you got enough information on Pokemon Go PC game in this post. I am damn sure that you are going to enjoy each and every moment by playing this game on the best ever Android emulator, Bluestacks! If you face any issues, you can check this guide on Bluestacks Pokemon Go unable to authenticate error which solves the issue of all inabilities of PoGo while playing it on PC or laptop. Don't forget to share this post on your social media accounts so that you can play this amazing game with your friends or loves ones! Happy Pokemoning.
