Set the layout with three columns and add images, graphics and text. Learn tips and tricks to refine your design, and then prepare it to print or share online. Typekit is now Adobe Fonts. What you need for example file practice (C.A.P., 5.7 MB) Start by creating the basic structure of your layout in a simple step. Set the correct units, number of pages, columns and margins. Make your pages live with artwork and colored graphics. Use the guides to help you place items on your page and learn how to quickly adapt any image to its frame without distorting it. Adobe Stock for thousands of images and illustrations without royalty. There are many ways to add text to your layout — place it in an existing text frame, copy and paste from any text document, simply type in place. See how to easily edit a standard text frame in a multi-colored frame. Browse high-quality fonts in the Adobe Typekit library and install them on your computer. Then format the text so that it is attractive and readable. Do not forget to add finishing touches — aligned objects, polish the look of your text, and add some design elements to make your brochure stand out. Save a PDF that you can email or upload to your printing service provider. With the Public Online function, you can immediately create a link to the brochure and share it online. Note: If you do not see the Publish Online button in the InDesign user interface, it means that the Adobe Creative Cloud subscription plan does not include access to this feature. Contact the plan administrator if you have any questions. Ready to try it yourself? Download sample files and recreate this elegant brochure design.
